Subject to change without notice

Return of Products Under Warranty

Please contact our Service Team before returning a defective device.

Ship the cleaned device to the address you have been given.

If the device has been in contact with process fluids, it must be decontaminated/ disinfected before shipment. In that case, please attach a corresponding certificate, for the health and safety of our service personnel.

Disposal

Please observe the applicable local or national regulations concerning the disposal of “waste electrical and electronic equipment”.

About This Manual:

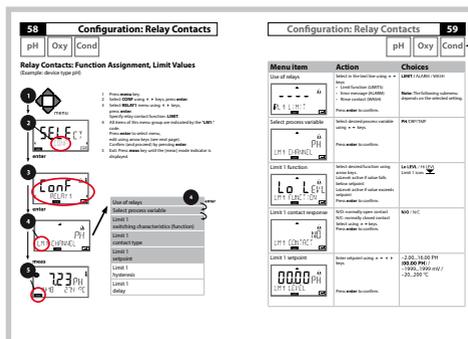

This manual is intended as a reference guide to your device –

You don’t have to read the book from front to back.

Take a look at the **Table of Contents** or the **Index** to find the function you are interested in. Each topic is explained on a double-page spread with step-by-step instructions on how to configure the desired function. Clearly legible page numbers and headlines help you to quickly find the information:

Left page:

How do I get to the function

← Parameter concerned

Right page:

Which settings are provided for this function

Safety Instructions

In official EU languages and others

Quickstart Guides

Installation and first steps:

- Operation
- Menu structure
- Calibration
- Error messages and recommended actions

EU Declarations of Conformity

Up-to date documentation available on our website:

Stratos Evo is a 4-wire analyzer for process analysis applications.

The analyzer comes as basic device for measurement with digital sensors (Memosens, optical oxygen measurement, inductive conductivity measurement). All measuring functions are stored in an internal memory. You select a measuring function to configure the analyzer for a specific measuring task. Additional measuring modules can be connected to allow measurement with analog sensors.

The Model A402B allows applications in hazardous-area Zone 2.

Current is provided through a universal power supply 80 ... 230 V AC, 45 ... 65 Hz / 24 ... 60 V DC. The analyzer provides two 0 (4) ... 20 mA current outputs for transmission of measured value and temperature, for example. Four floating relay contacts are available for free configuration. A PID controller and a time-controlled cleaning function can be configured. Two parameter sets are provided. You can externally switch between them via the Control input, for example. The HOLD input allows setting the HOLD mode from the outside. The analyzer also provides power supply and allows signal processing for additional transmitters, e.g., for flow monitoring.

You can select one of the following measuring functions:

- pH
- ORP
- Oxygen
- Oxygen, optical
- Conductivity measurement (conductive/inductive)
- Dual conductivity measurement using two analog sensors
- Dual measurement of pH/pH and pH/Oxy using two Memosens sensors

Enclosure and mounting possibilities

- The sturdy molded enclosure is rated IP 67/NEMA 4X outdoor.

Material of front unit: PBT, rear unit: PC.

Dimensions: H 148 mm, W 148 mm, D 117 mm.

It is provided with knockouts for:

- panel mounting (138 mm x 138 mm cutout to DIN 43700)
- wall mounting (with sealing plugs to seal the enclosure)
- post/pipe mounting (dia. 40 ... 60 mm, □ 30 ... 45 mm)

Connection of sensors, cable glands

For connecting the cables, the enclosure provides

- 3 knockouts for cable glands M20x1.5
- 2 knockouts for NPT 1/2" or rigid metallic conduit

Display

Plain-text messages in a large, backlit LC display allow intuitive operation. You can specify which values are to be displayed in standard measuring mode ("Main Display").

Color-coded user interface

The colored display backlighting signals different operating states (e.g., alarm: red, HOLD mode: orange).

Diagnostics functions

The "Sensocheck" automatic sensor monitoring and the "Sensoface" function for clear indication of the sensor condition provide excellent diagnostics.

Data Logger

The internal logbook (additional function, TAN SW-A002) can handle up to 100 entries – up to 200 with AuditTrail (additional function, TAN SW-A003).

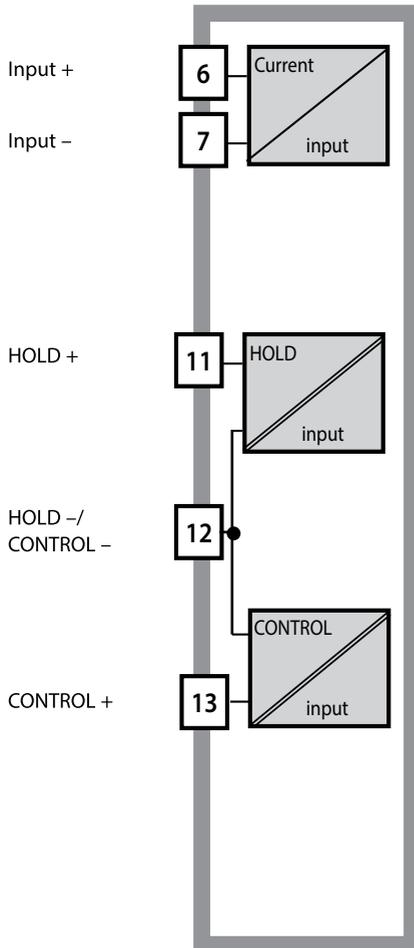

2 parameter sets A/B

The device provides two parameter sets which can be switched manually or via a control input for different process adaptations or different process conditions. For an overview of parameter sets (original for copy), refer to the CD or www.knick.de.

Password protection

Password protection (passcode) for granting access rights during operation can be configured.

Control inputs

I input

The analog (0) 4 ... 20 mA current input can be used for external pressure or temperature compensation. (TAN required.)

HOLD

(floating digital control input)

The HOLD input can be used for external activation of the HOLD mode.

CONTROL

(floating digital control input)

The CONTROL input can be used either for parameter set selection (A/B) or for flow monitoring. The "Wash" contact can be used for indicating the active parameter set.

Power supply

Current is provided through a universal power supply 80 ... 230 V AC, 45 ... 65 Hz / 24 ... 60 V DC.

Options

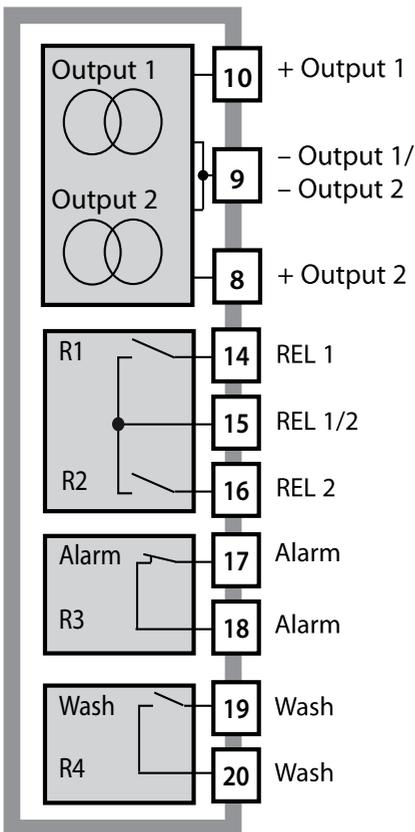

Additional functions can be activated by entering a TAN.

Signal outputs

The analyzer provides two 0 (4) ... 20 mA current outputs for transmission of measured value and temperature, for example.

Relay contacts

Four floating relay contacts are available.

Current outputs

The floating current outputs (0) 4 ... 20 mA are used for transmitting measured values. An output filter can be programmed, the fault current value can be specified.

Relay contacts

2 relay contacts for limit values. Adjustable for the selected process variable: hysteresis, switching behavior (MIN/MAX limit), contact type (N/O, N/C) and delay.

Alarm

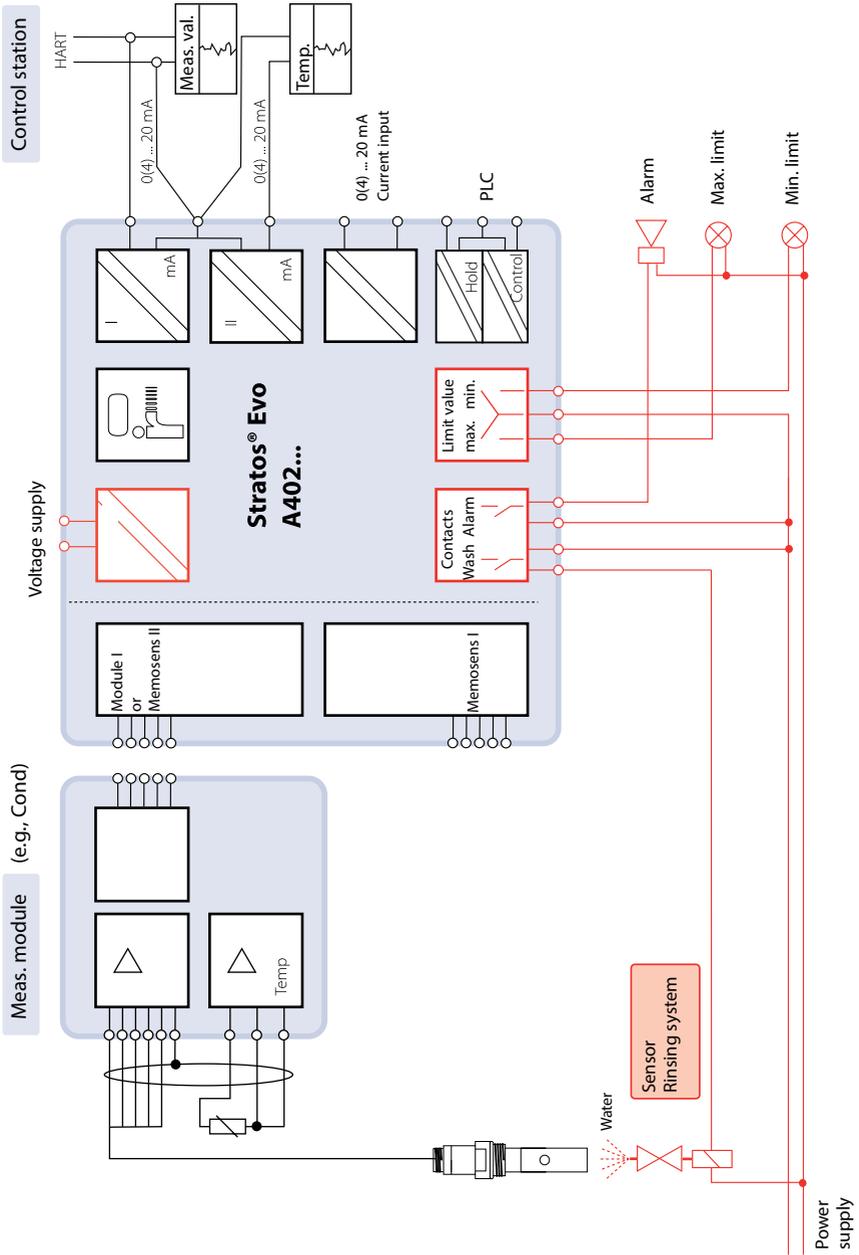

An alarm can be generated by Sensocheck, flow monitoring or current failure.

Wash (cleaning function)

This contact can be used for controlling a rinsing probe or for indicating the active parameter set.

PID controller

Configurable as pulse length or pulse frequency controller.

Package Contents

Check the shipment for transport damage and completeness.

The package should contain:

Front unit, rear unit, bag containing small parts

Terminal Assignments

The terminals are suitable for single or stranded wires up to 2.5 mm² (AWG 14).

A402N Rating Plate

Knick >	
A4*2N	
No. 84192 / 0000000 / 1233	
-20 ≤ T _a ≤ +55 °C	Power
EnclosureType4X	80 (-15%) to 230 (+10%) V AC, 45 to 65 Hz, < 15 VA
	24 (-15%) to 60 (+10%) V DC, ≈ 10 W
D-14163Berlin Made in Germany	  

Installation Instructions

- Installation of the device must be carried out by trained experts in accordance with this user manual and as per applicable local and national codes.
- Be sure to observe the technical specifications and input ratings during installation!
- Be sure not to notch the conductor when stripping the insulation!
- Before connecting the device to the power supply, make sure that its voltage lies within the range 80 to 230 V AC/DC or 24 to 60 V DC.
- A signal current supplied to the current input must be galvanically isolated. If not, connect an isolator module.
- All parameters must be set by a system administrator prior to commissioning.

Terminals

suitable for single or stranded wires up to 2.5 mm² (AWG 14)

Application in Hazardous Locations

When using the device in a hazardous location, observe the specifications of the Control Drawing.

Power Supply

Connect the power supply for Stratos Evo to terminals 21 and 22
(24 ... 230 V AC, 45 ... 65 Hz / 24 ... 80 V DC)

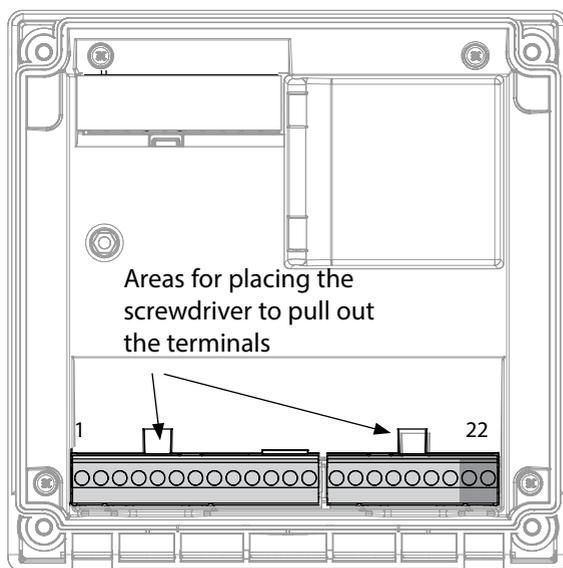

Figure:
Terminals, device opened,
back of front unit

Connecting the Memosens Sensor

Connect the Memosens sensor to the RS-485 interface of the device. Then select the measuring function. (When you change to another sensor type, you can change the measuring function in the "Service" menu.)

When you select the sensor in the Configuration menu, the calibration data are read from the sensor. They can later be modified by calibration.

Start-Up

When you start up the analyzer for the first time, you will be prompted to select the desired measurement procedure (a connected Memosens sensor will not be identified automatically).

Changing the Measuring Function

In the "Service" menu you can select another measuring function at any time.

Calibration and Maintenance in the Lab

The "MemoSuite" software allows calibrating Memosens sensors under reproducible conditions at a PC in the lab. The sensor parameters are registered in a database. Documenting and archiving meet the demands of FDA CFR 21 Part 11. Detailed reports can be output as csv export for Excel. MemoSuite is available as accessory and comes in the versions "Basic" and "Advanced": www.knick.de.

Settings and specifications

Memosens Cable

Connecting cable for non-contact inductive digital transmission of measured signals (Memosens).

By providing perfect galvanic isolation between sensor and analyzer/transmitter, the Memosens cable prevents measurement interferences. Any effects of humidity and corrosion are prevented.

Specifications

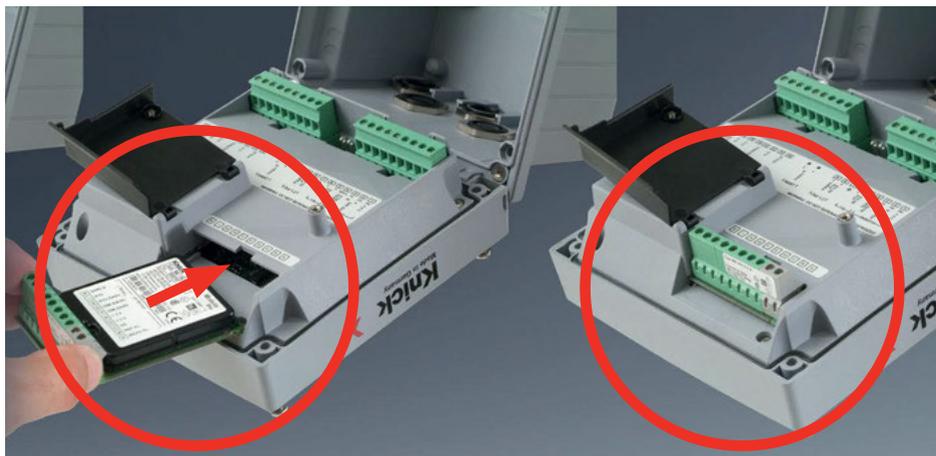

Material	TPE
Cable diameter	6.3 mm
Length	up to 100 m
Process temperature	-20 °C ... +135 °C / -4 ... +275 °F

Other cable lengths or cable types are available on request.

* Ex-certified ATEX II 1G Ex ia IIC T3/T4/T6 Ga

Measuring modules for connection of analog conductivity sensors:

Measuring modules for the connection of analog sensors are simply inserted into the module slot. Upon initial start-up, the analyzer automatically recognizes the module and adjusts the software correspondingly. When you replace the measuring module, you must select the corresponding measuring function in the “Service” menu.

This does not apply to the multi-channel module for dual conductivity measurement and to the connection of Memosens sensors. Here, you will be prompted to select the desired measuring function upon first start-up.

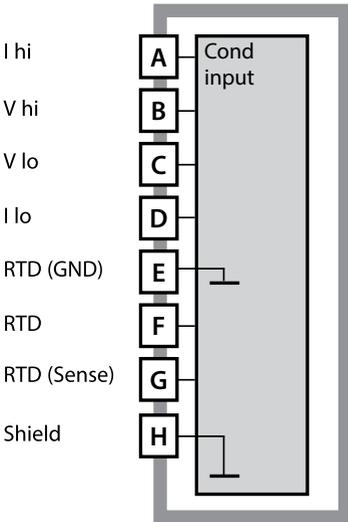

Multi-channel module for connection of analog sensors: dual conductivity

For this module, you must select the operating mode (“device type”) in the configuration menu.

Changing the Measuring Function

In the “Service” menu you can select another measuring function at any time.

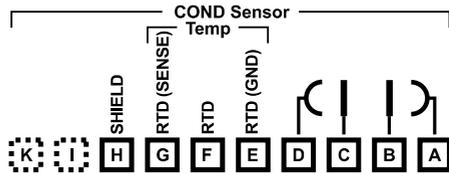

Cond

Module for contacting conductivity measurement (Cond)

Order code MK-COND025...

See the following pages for wiring examples.

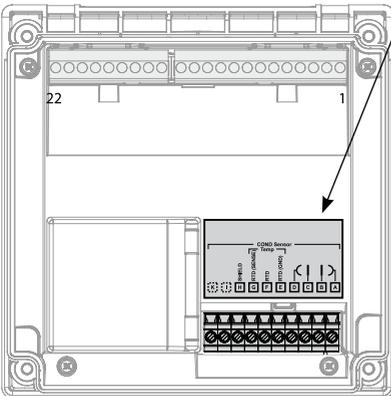

Terminal plate of module for Cond measurement

The terminals are suitable for single or stranded wires up to 2.5 mm² (AWG 14).

The measuring module comes with a self-adhesive label.

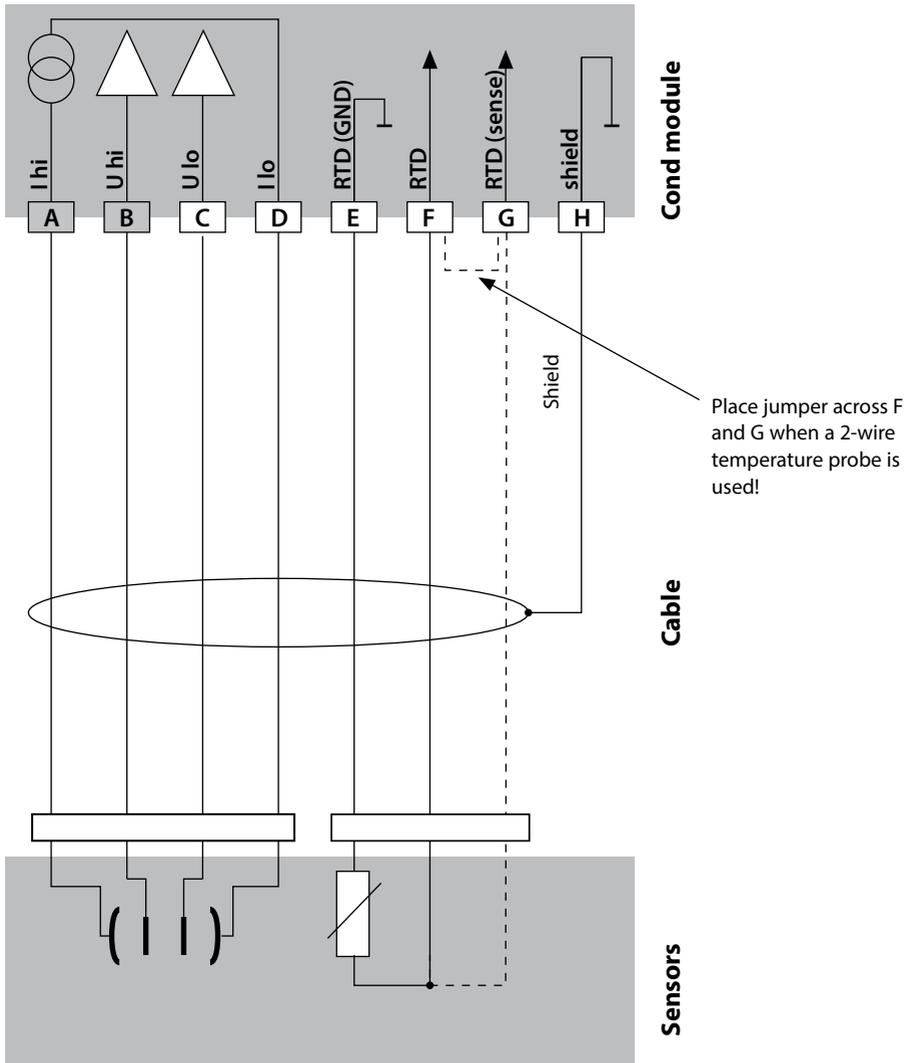

Stick the label to the module slot on the device front. This way, you have the wiring "under control".

Example 1:

Measuring task: Conductivity, temperature

Sensors (principle): 4 electrodes

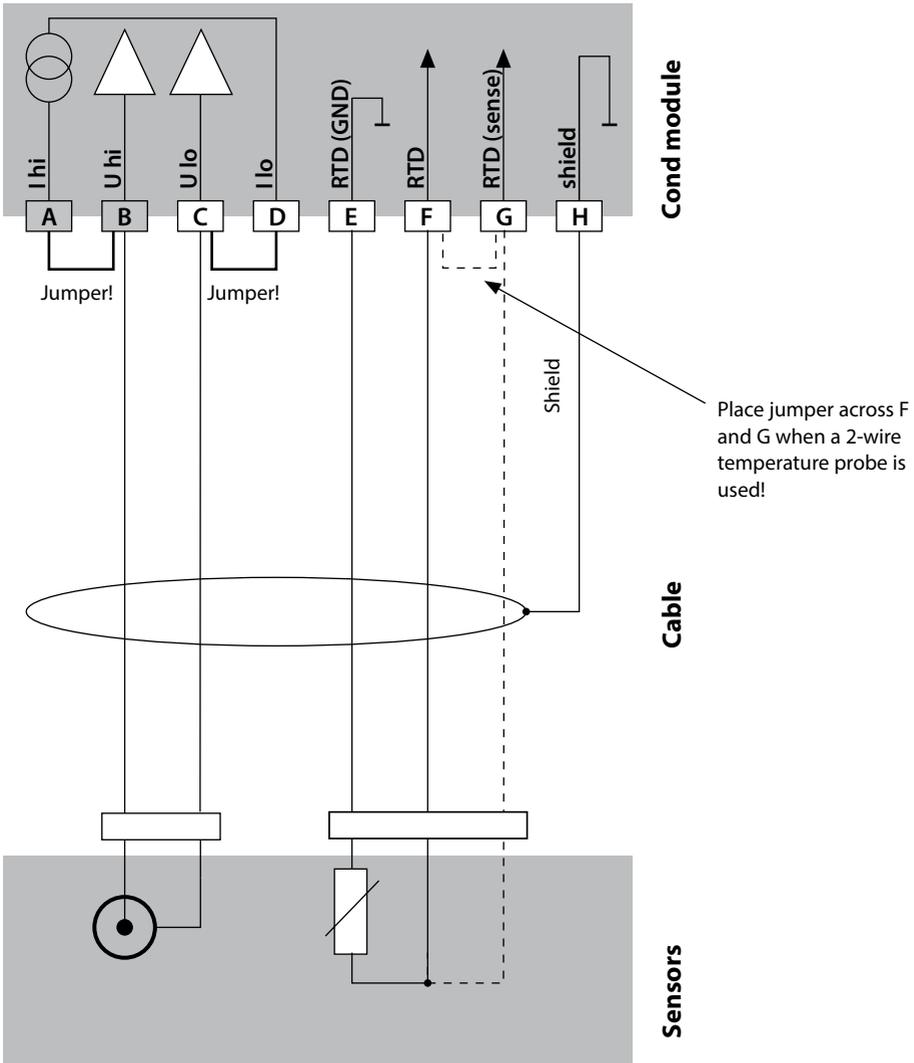

Cond

Example 2:

Measuring task: Conductivity, temperature

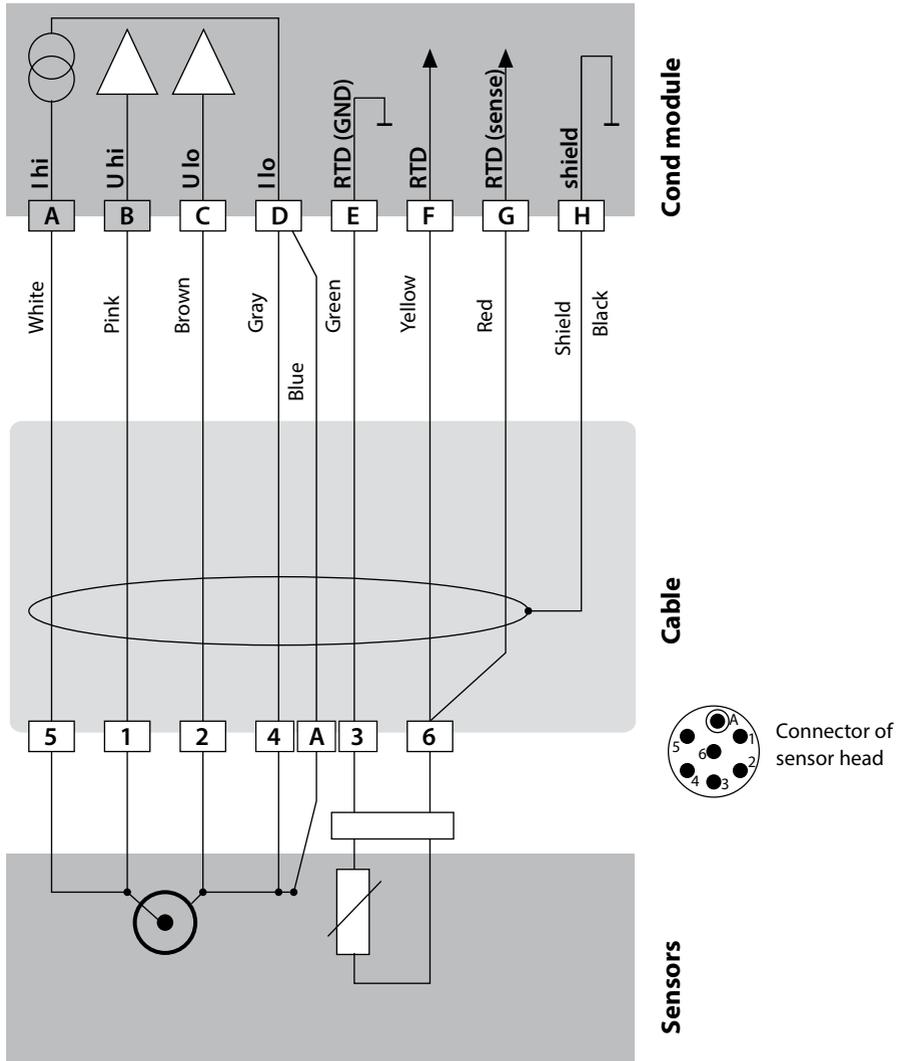

Sensors (principle): 2 electrodes, coaxial

Example 3:

Measuring task: Conductivity, temperature

Sensors (example): SE 604, cable: ZU 0645

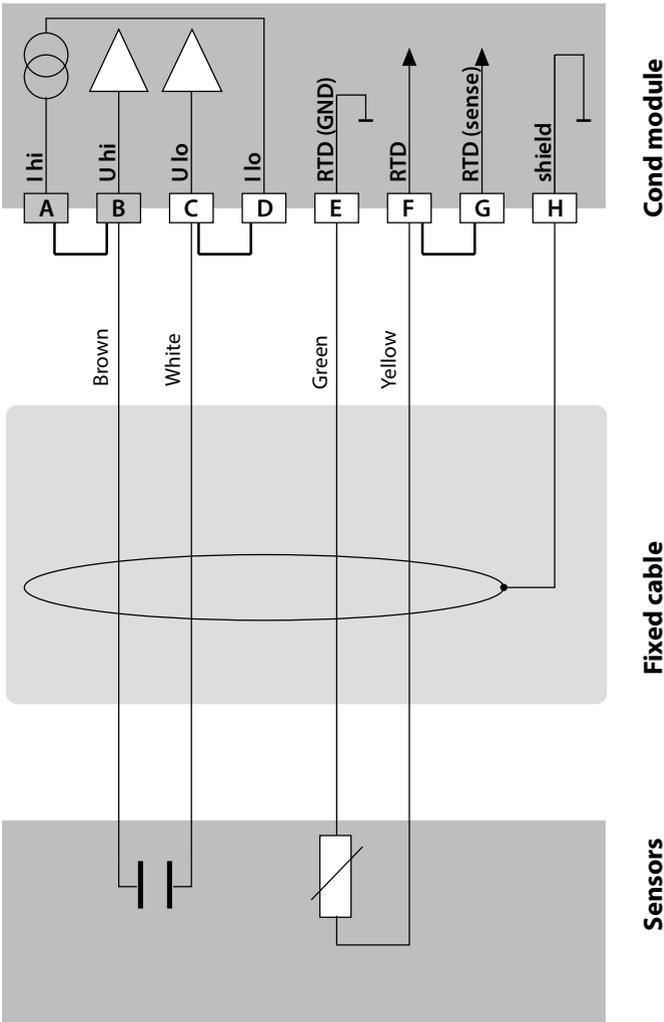

Cond

Example 4:

Measuring task: Conductivity, temperature

Sensors (example): SE 610

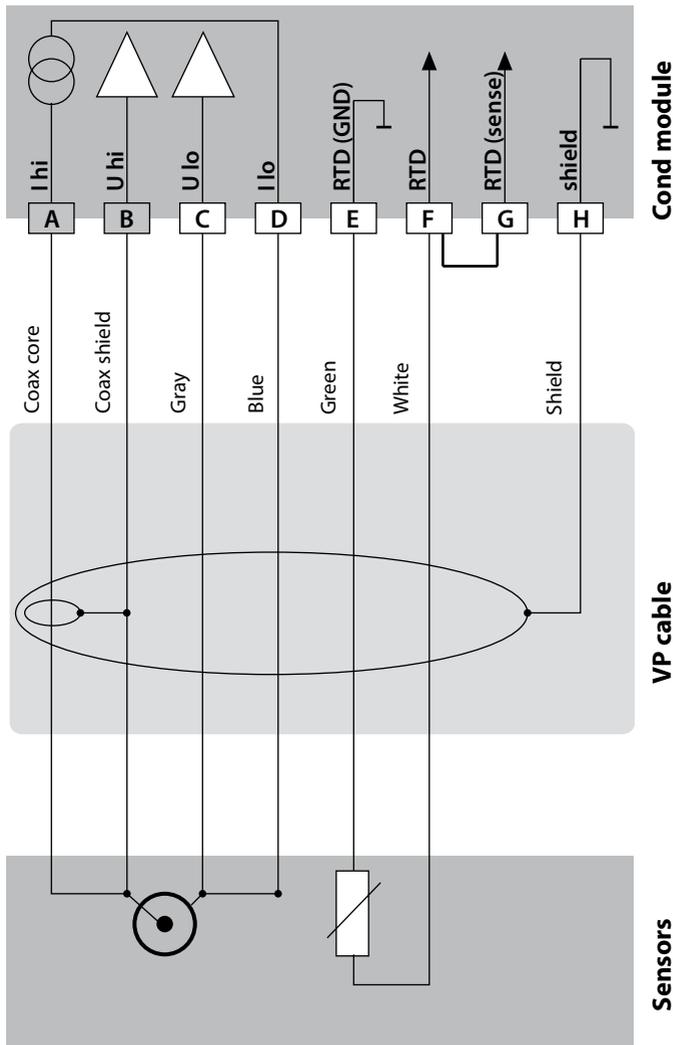

Example 5:

Measuring task: Conductivity, temperature

Sensors (example): SE 620

VP cable e.g., CA/VP6ST-003A

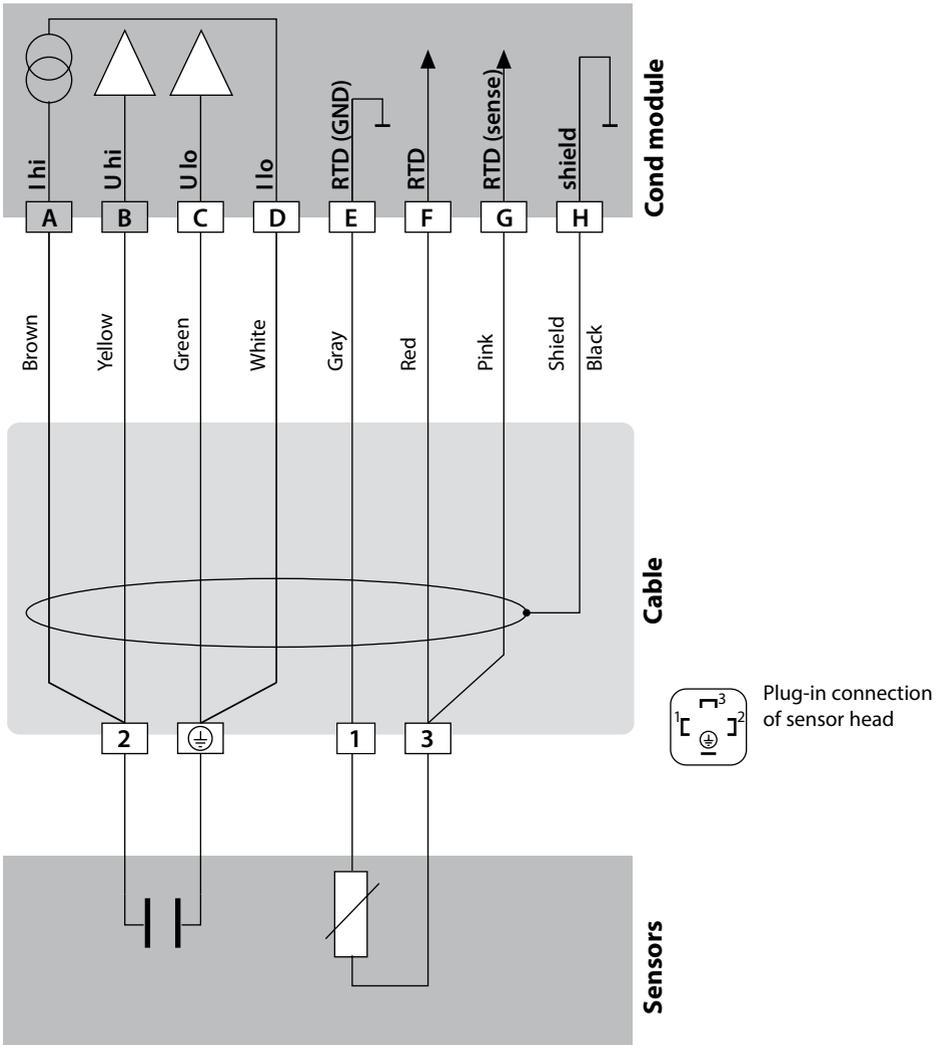

Cond

Example 6:

Measuring task: Conductivity, temperature

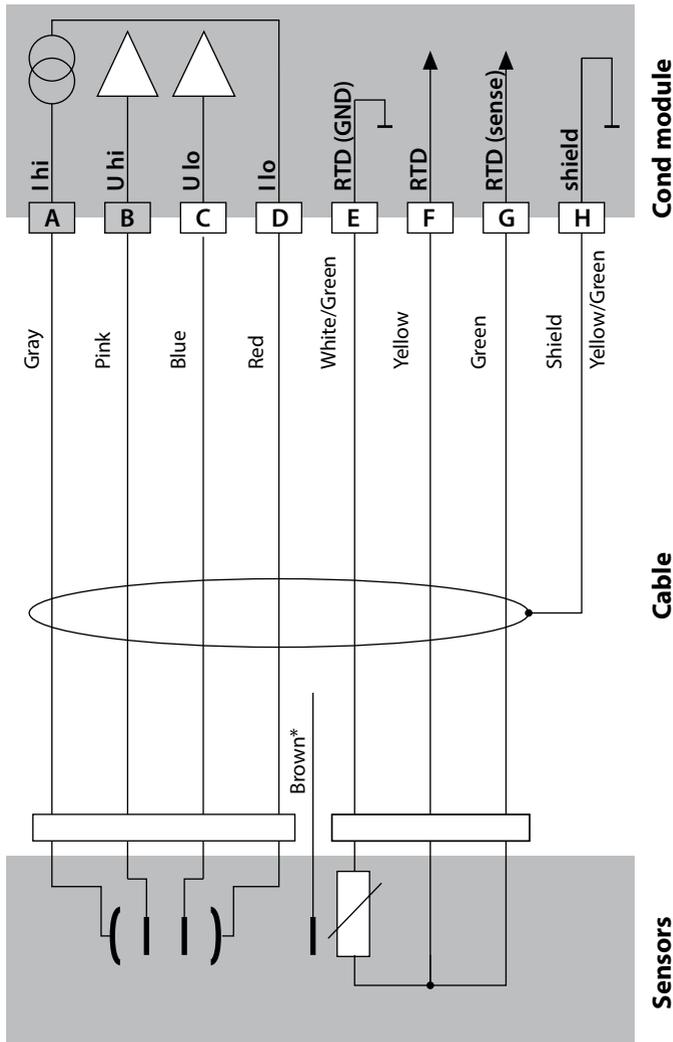

Sensors (example): SE 630

Example 7:

Measuring task: Conductivity, temperature

Sensors (example): SE 600 / SE 603 4-EL fringe-field sensor (Knick)

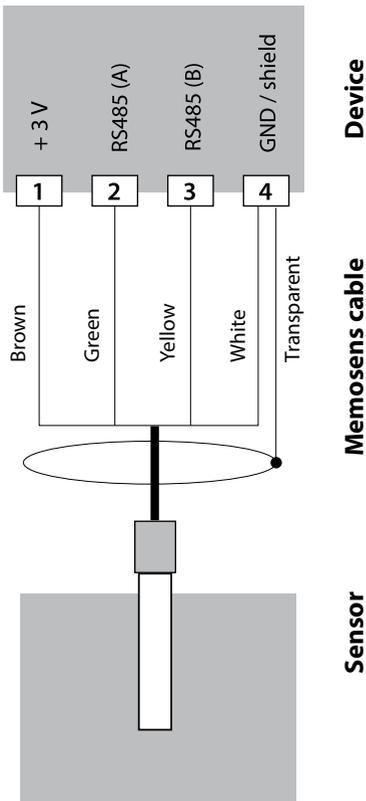

* Do not connect

Cond

Example 8:

Measuring task: Conductivity, temperature

Sensor: Memosens

**Examples:**

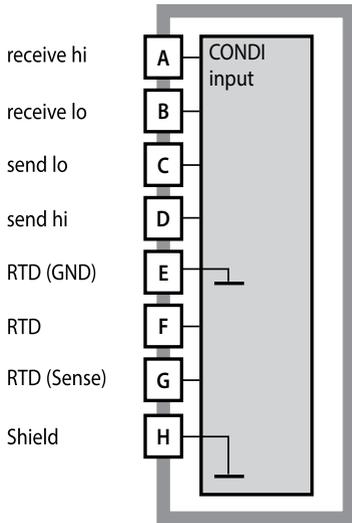

SE 604(X)-MS

SE 605H-...

SE 615/1-MS

SE 630(X)-MS

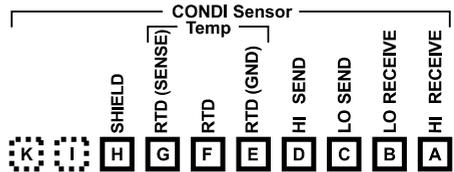

Connect the Memosens sensor to the RS-485 interface of the device.

Module for inductive conductivity measurement (Condi)

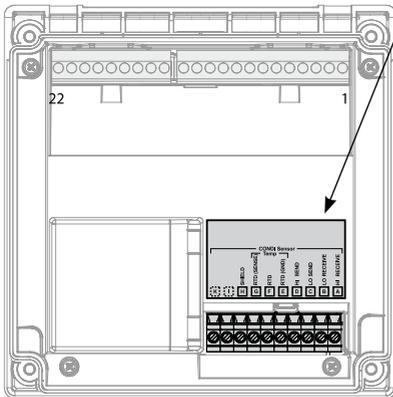

Order code MK-CONDI035...

See the following pages for wiring examples.

Terminal plate of Condi module

The terminals are suitable for single or stranded wires up to 2.5 mm² (AWG 14).

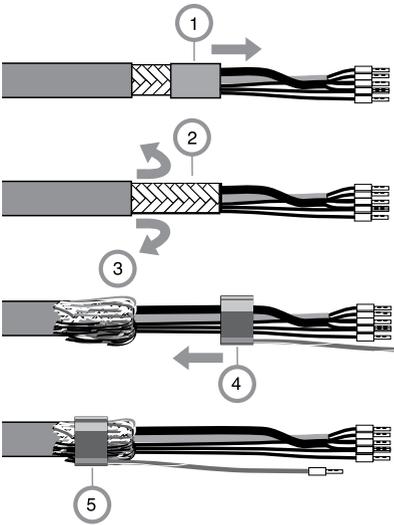

The measuring module comes with a self-adhesive label.

Stick the label to the module slot on the device front. This way, you have the wiring "under control".

Condl

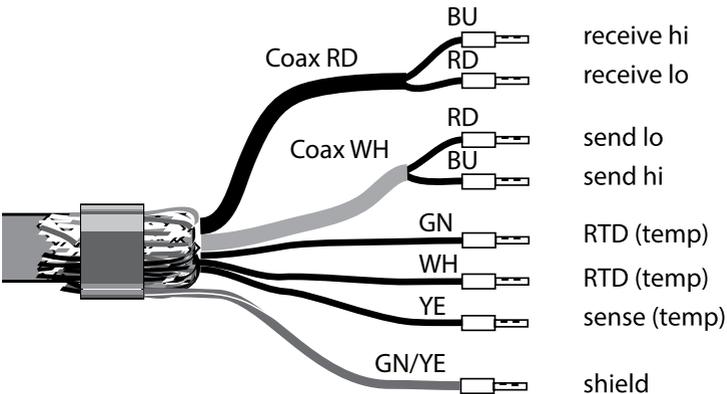

Preparing the Shield Connection

Pre-assembled special cable for SE 655 / SE 656 sensors

- Insert the special cable through the cable entry into the terminal compartment.
- Remove the already separated part of the cable insulation (1).
- Turn the shielding mesh (2) over the cable insulation (3).
- Then shift the crimp ring (4) over the shielding mesh and tighten it using a pincer (5)

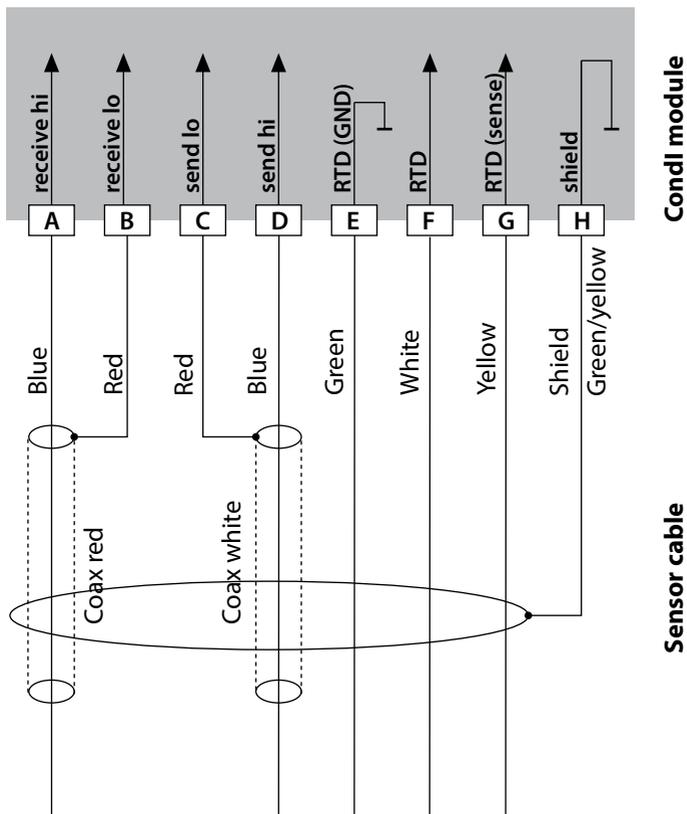

The pre-assembled special cable:

Example 1:

Measuring task: Noncontacting conductivity, temperature

Sensors: SE 655 or SE 656

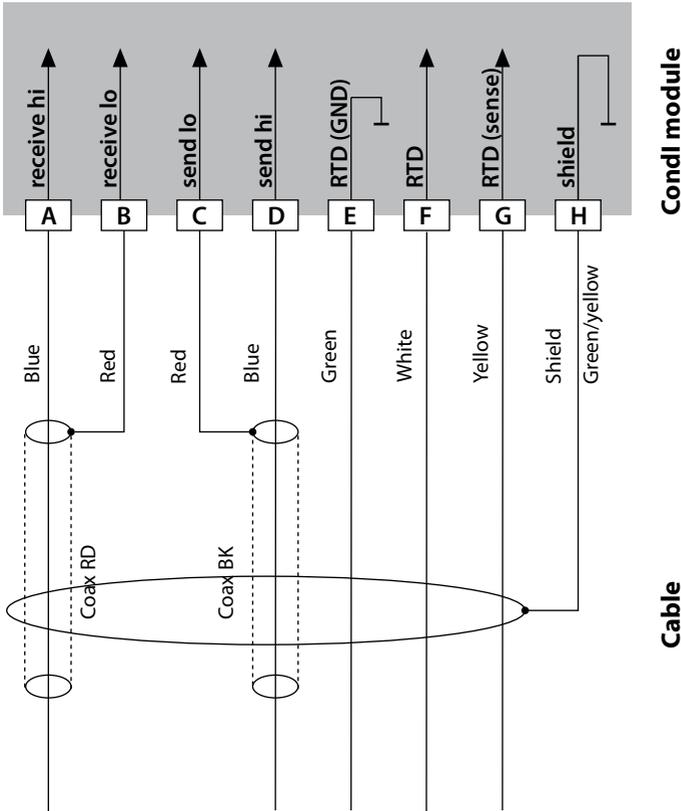

Condl

Example 2:

Measuring task: Conductivity, temperature

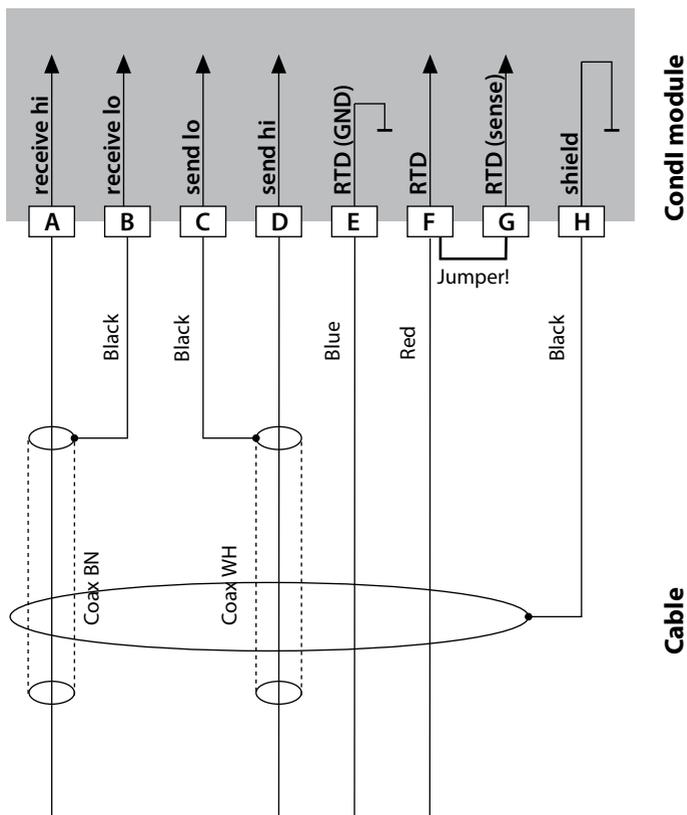

Sensor: SE 660

Example 3:

Measuring task: Conductivity, temperature

Sensor: Yokogawa ISC40 (Pt1000)

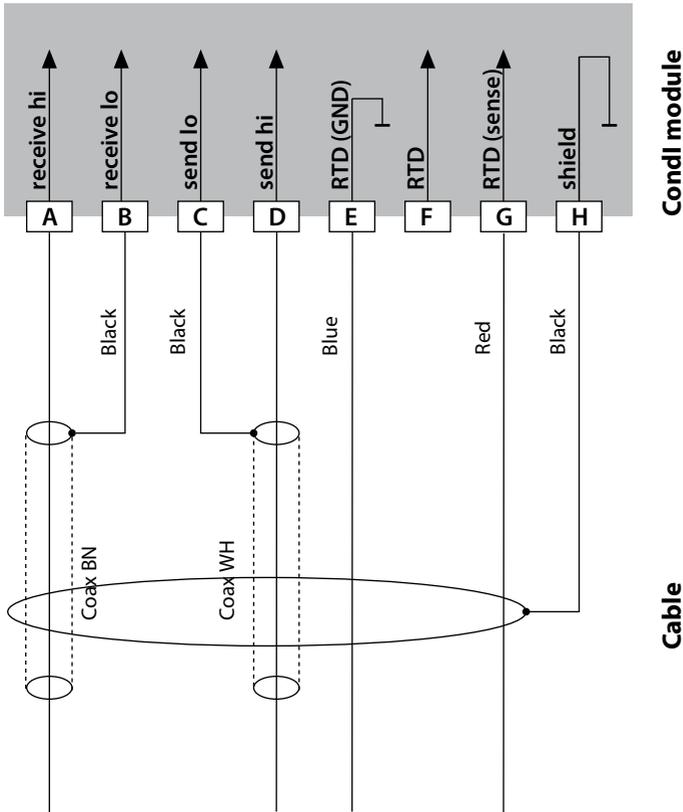

Configuration settings for this sensor:

Sensor:	Conductivity, temperature
SENSOR	OTHER
RTD TYPE	1000Pt
CELL FACTOR	1.88
TRANS RATIO	125

Condl

Example 4:

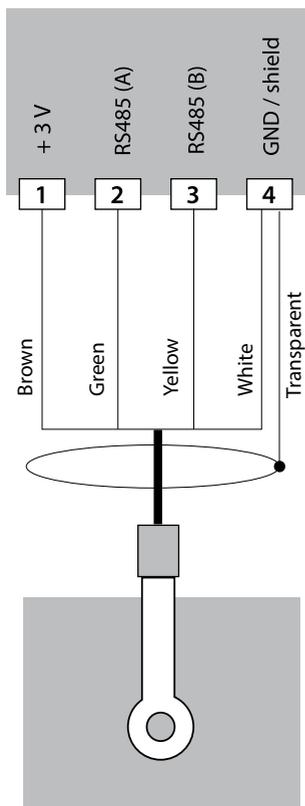

Measuring task: Conductivity, temperature
 Sensor: Yokogawa IC40S (NTC 30k)

**Configuration settings for this sensor:**

Sensor:	Conductivity, temperature
SENSOR	OTHER
RTD TYPE	30 NTC
CELL FACTOR	approx. 1.7
TRANS RATIO	125

Example 5:

Measuring task: Noncontacting conductivity, temperature
 Sensor: SE 670, SE 680
 Cable: CA/M12-005NA

Device

Cable

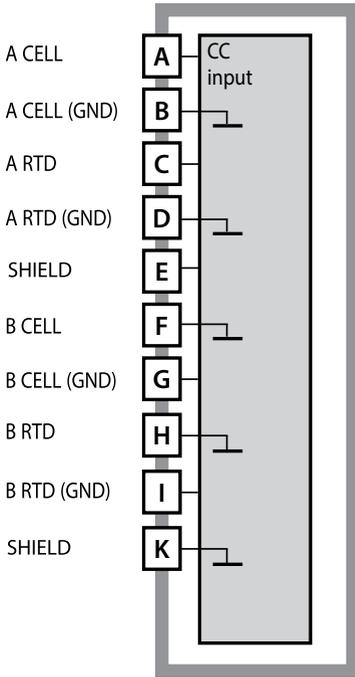

Sensor, M12 connector

Cable types:

- M12/ferrules
- 5 m CA/M12-005NA
- 10 m CA/M12-010NA
- 20 m CA/M12-020NA

Connect the SE 670 / SE 680 sensor to the RS-485 interface of the device. When SE 670 / SE 680K is selected as sensor in the Configuration menu, the default values are taken as calibration data. They can then be modified by calibration. All calibration data of the SE 680M sensor with Memosens protocol are stored in the sensor.

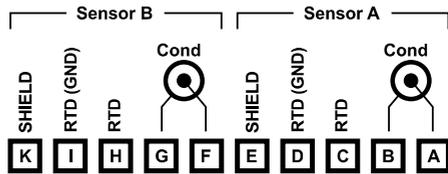

Cond Cond

Module for dual conductivity measurement

Order code MK-CC065...

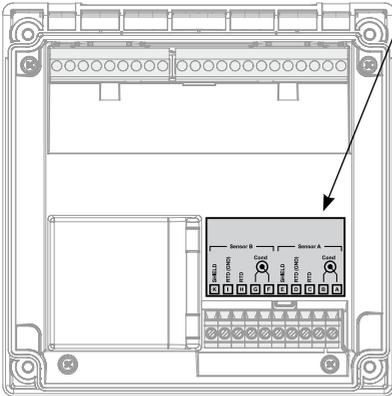

See the following pages for wiring examples.

Terminal plate for dual conductivity measurement

The terminals are suitable for single or stranded wires up to 2.5 mm² (AWG 14).

The measuring module comes with a self-adhesive label. Stick the label to the module slot on the device front. This way, you have the wiring “under control”.

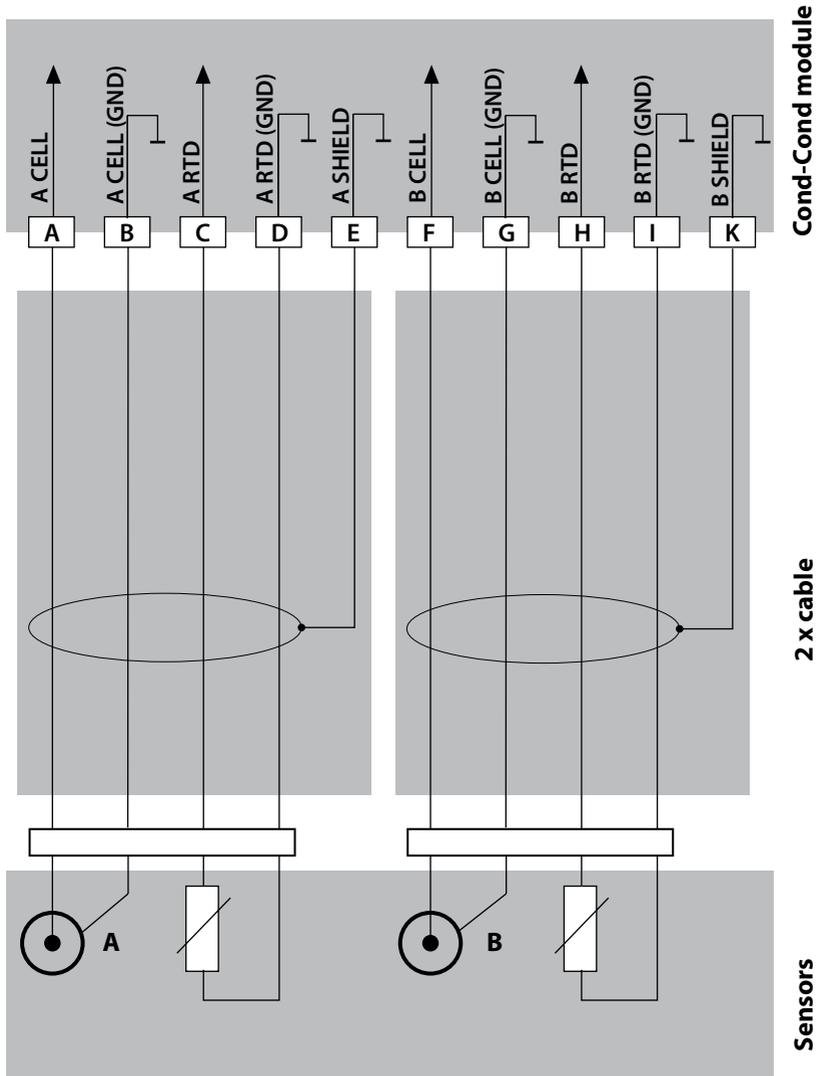

Cond

Cond

Example 1:

Measuring task: Dual conductivity, temperature

Sensors (principle): 2 x 2-electrode sensor

Cond

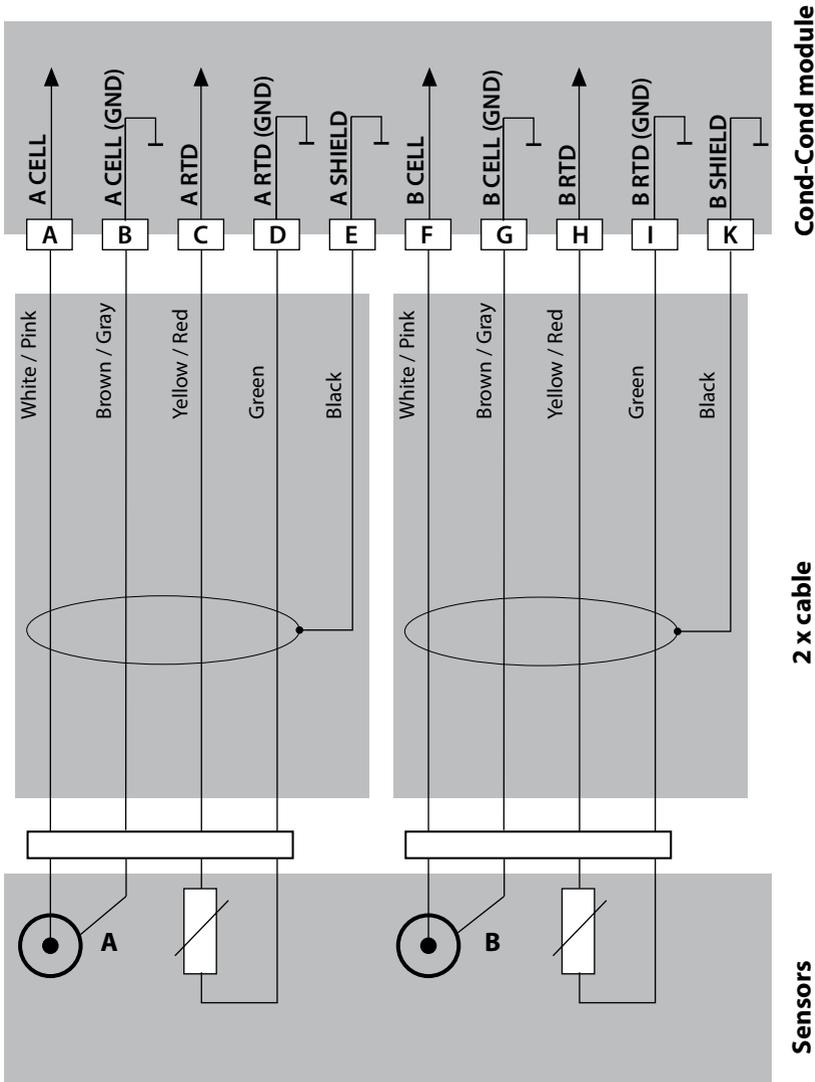

Cond

Example 2:

Measuring task: Dual conductivity, temperature

Sensors: 2 x SE 604

Cable: 2 x ZU 0645

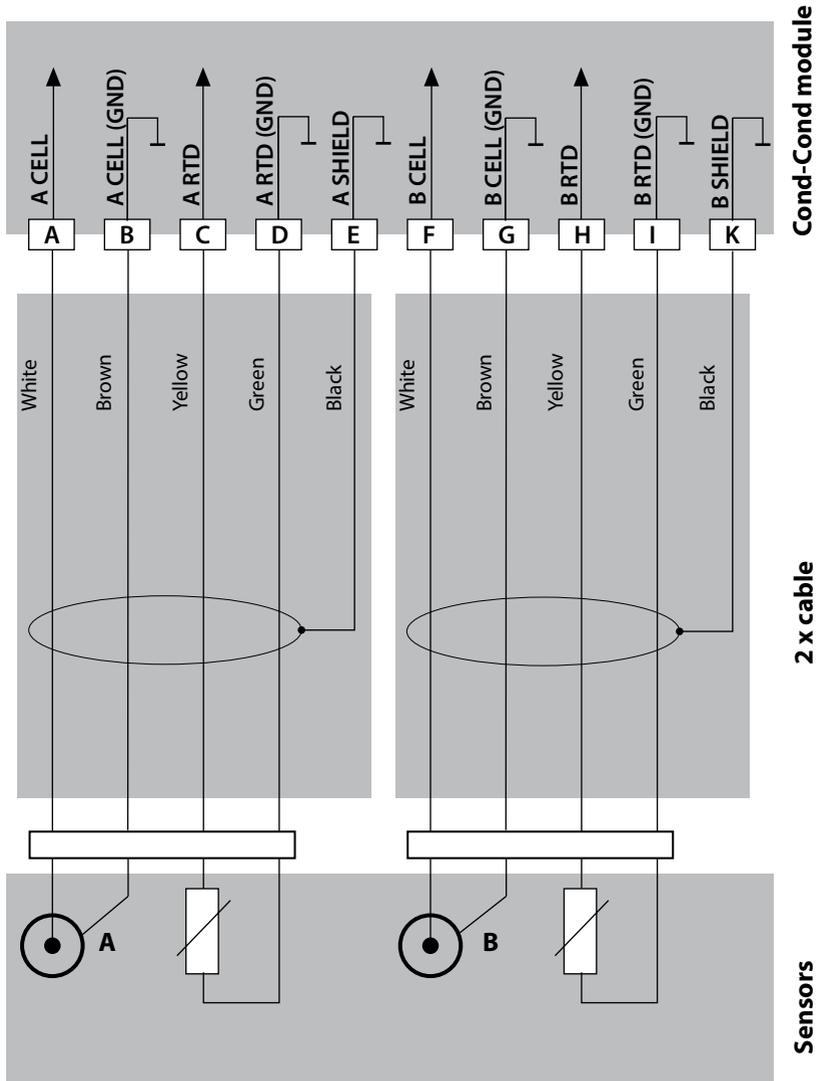

Cond

Cond

Example 3:

Measuring task: Dual conductivity, temperature

Sensors: 2 x SE 610

Measuring Mode

Prerequisite: A Memosens sensor is connected or a measuring module is installed with a corresponding analog sensor connected.

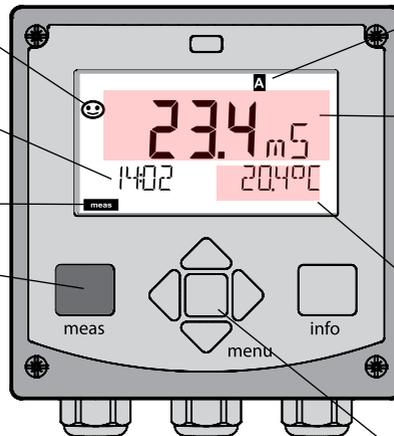

After the operating voltage has been connected, the analyzer automatically goes to "Measuring" mode. To call the measuring mode from another operating mode (e.g., Diagnostics, Service): Hold **meas** key depressed (> 2 s).

Sensoface indicator
(sensor status)

Time
(or flow)

Mode indicator
(measuring)

Hold **meas** key
depressed for calling
the measuring mode
(hitting the key once
more switches the
display)

Active parameter set
(configuration)

Display indicates
OUT1:
e.g., measured
value

Display indicates
OUT2:
e.g., temperature

enter key

Depending on the configuration, you can set various displays as standard display for the measuring mode (see page 47).

Note: By pressing the **meas** key in measuring mode you can view the displays for approx. 60 sec.

NOTICE:

You must configure the analyzer for the respective measurement task.

Up / Down arrows

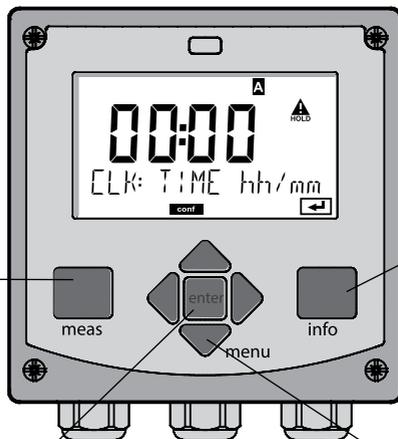

- Menu: Increase/decrease a numeral
- Menu: Selection

Left / Right arrows

- Menu: Previous/next menu group
- Number entry: Move between digits

meas

- Return to last menu level
- Directly to measuring mode (press > 2 s)
- Measuring mode: other display (temporarily for approx. 60 s)

enter

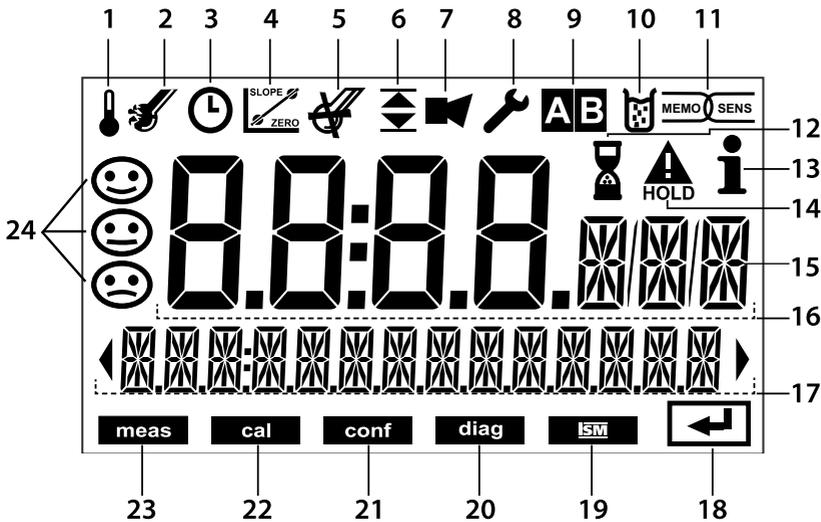

- Configuration: Confirm entries, next configuration step
- Calibration: Continue program flow

info

- Retrieve information
- Show error messages

Signal Colors (Display Backlighting)

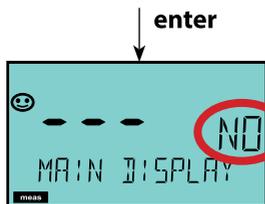

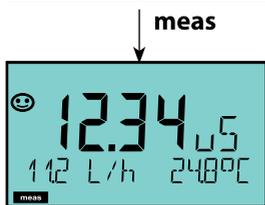

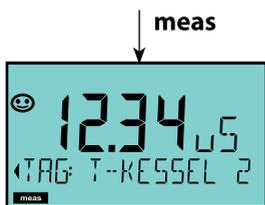

- | | |
|--------------|---|
| Red | Alarm (in case of fault: display values blink) |
| Red blinking | Input error: illegal value or wrong passcode |
| Orange | HOLD mode (Calibration, Configuration, Service) |
| Turquoise | Diagnostics |
| Green | Info |
| Magenta | Sensoface message (pre-alarm) |

The MAIN DISPLAY is the display which is shown in measuring mode. To call the measuring mode from any other mode, hold the **meas** key depressed for at least 2 sec.

meas key

enter key

By pressing **meas** briefly you can step through further displays such as tag number (TAG) or flow (L/h).

These displays are turquoise. After 60 sec they switch back to the main display.

Press **enter** to select a display as MAIN DISPLAY.

The secondary display shows "MAIN DISPLAY – NO".

Use the **UP / DOWN** arrows to select "MAIN DISPLAY – YES"

and confirm by pressing **enter**.

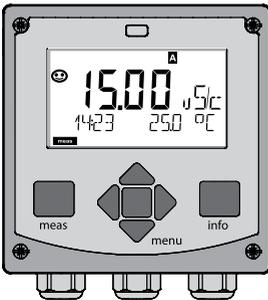

The display color changes to white.

This display is now shown in measuring mode.

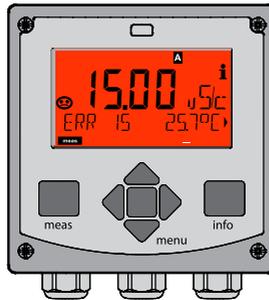

The color-coded user interface guarantees increased operating safety. Operating modes are clearly signaled.

The normal measuring mode is white. Information text appears on a green screen and the diagnostic menu appears on turquoise. The orange HOLD mode (e.g., during calibration) is quickly visible as is the magenta screen which indicates asset management messages for predictive diagnostics – such as maintenance request, pre-alarm and sensor wear.

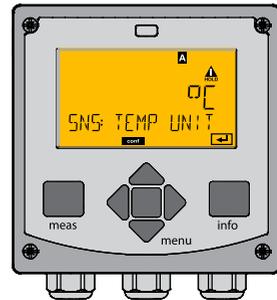

The alarm status has a particularly noticeable red display color and is also signaled by flashing display values. Invalid inputs or false passcodes cause the entire display to blink red so that operating errors are significantly reduced.

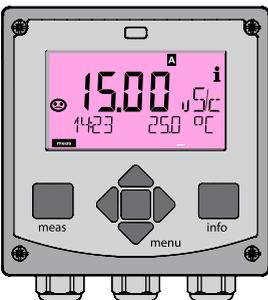

White:
Measuring mode

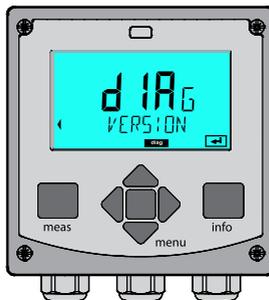

Red blinking:
Alarm, error

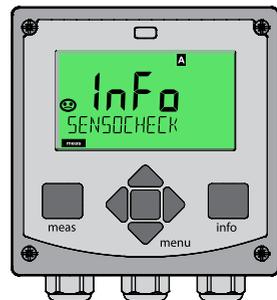

Orange:
HOLD mode

Magenta:
Maintenance request

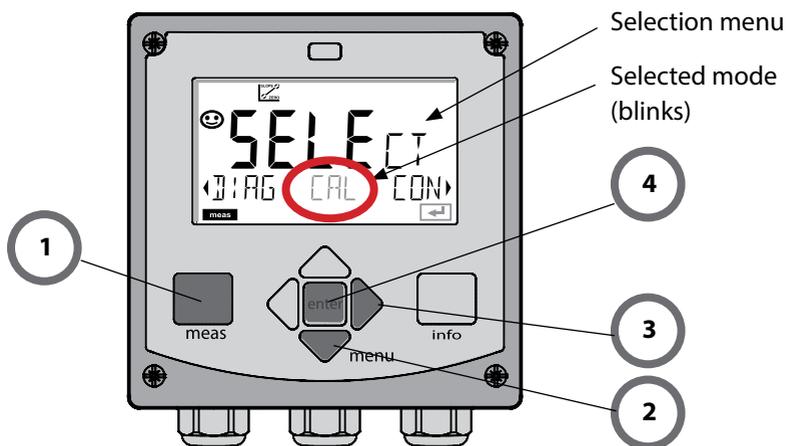

Turquoise:
Diagnostics

Green:
Info texts

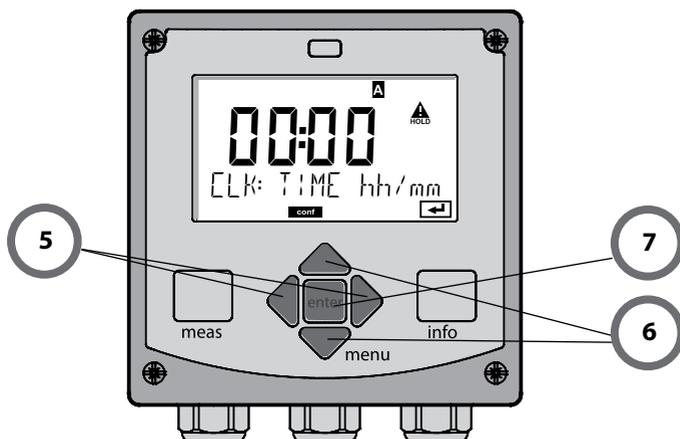

To select the operating mode:

- 1) Hold **meas** key depressed (> 2 s) (measuring mode)
- 2) Press **menu** key: the selection menu appears
- 3) Select operating mode using left / right arrow key
- 4) Press **enter** to confirm the selected mode

To enter a value:

- 5) Select numeral: left / right arrow
- 6) Change numeral: up / down arrow
- 7) Confirm entry by pressing **enter**

Diagnostics

Display of calibration data, display of sensor data, sensor monitor, performing a device self-test, viewing the logbook entries, display of hardware/software versions of the individual components. The logbook can store 100 events (00...99). They can be displayed directly on the device. The logbook can be extended to 200 entries using a TAN (Option).

HOLD

Manual activation of HOLD mode, e.g., for replacing a sensor. The signal outputs adopt a defined state.

Calibration

Every sensor has typical characteristic values, which change in the course of the operating time. Calibration is required to supply a correct measured value. The device checks which value the sensor delivers when measuring in a known solution. When there is a deviation, the device can be "adjusted". In that case, the device displays the "actual" value and internally corrects the measurement error of the sensor. Calibration must be repeated at regular intervals. The time between the calibration cycles depends on the load on the sensor. During calibration the device is in HOLD mode.

During calibration the device remains in the HOLD mode until it is stopped by the operator.

Configuration

You must configure the analyzer for the respective measurement task. In the "Configuration" mode you select the adjusted measuring function, the connected sensor, the measuring range to be transmitted, and the conditions for warning and alarm messages. During configuration the device is in HOLD mode.

Configuration mode is automatically exited 20 minutes after the last keystroke. The device returns to measuring mode.

Service

Maintenance functions (current source, relay test, controller test), passcode assignment, device type selection, reset to factory settings, enabling of options (TAN).

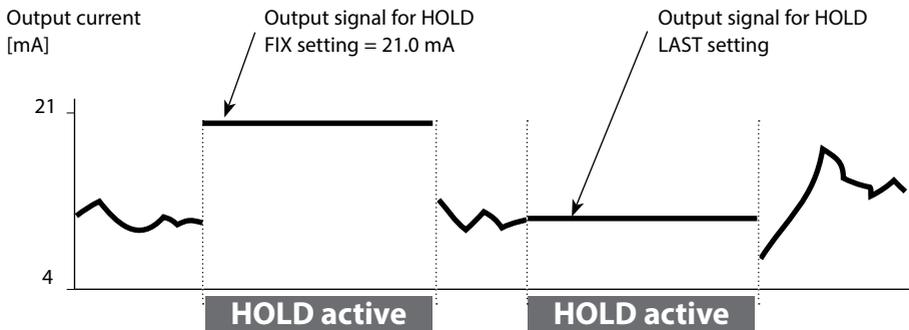

The HOLD mode is a safety state during configuration and calibration. Output current is frozen (LAST) or set to a fixed value (FIX). Alarm and limit contacts are disabled. The display backlighting turns orange, display icon:

Output signal response

- **LAST:** The output current is frozen at its last value. Recommended for short configuration procedures. The process should not change decisively during configuration. Changes are not noticed with this setting!
- **Fix:** The output current is set to a value that is noticeably different from the process value to signal the control system that the device is being worked at.

Output signal during HOLD:

Terminating the HOLD mode

The HOLD mode is exited by switching to measuring mode (hold **meas** key depressed). The display reads “Good Bye”. After that, the HOLD mode is exited. When the calibration mode is exited, a confirmation prompt ensures that the installation is ready for operation (e.g.: sensor reinstalled, located in process).

External activation of HOLD

The HOLD mode can be activated from outside by sending a signal to the HOLD input (e.g., from the process control system).

HOLD inactive	0...2 V AC/DC
HOLD active	10...30 V AC/DC

Alarm

When an error has occurred, **Err xx** is displayed immediately.

Only after expiry of a user-defined delay time will the alarm be registered and entered in the logbook.

During an alarm the display blinks, the display backlighting turns **red**.

Error messages can also be signaled by a 22 mA output current (when configured correspondingly).

The alarm contact is activated by alarm or power failure. 2 sec after the failure event is corrected, the alarm status will be deleted.

The 22-mA signal can also be triggered by Sensoface messages (configurable).

Generating a message via the CONTROL input

(min. flow / max. flow)

The CONTROL input can be used for parameter set selection or for flow measurement (pulse principle), depending on its assignment in the "Configuration" menu.

First, the flow transmitter must be calibrated in the CONTROL menu: ADJUST FLOW

When preset to flow measurement

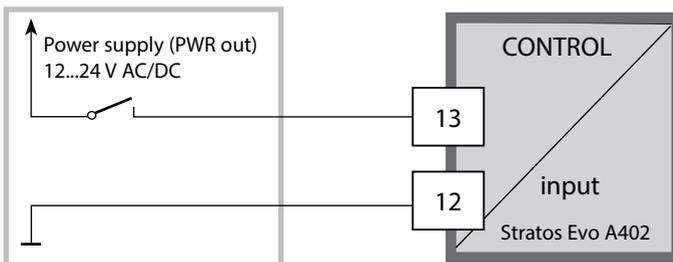

CONF/CNTR_IN/CONTROL = FLOW

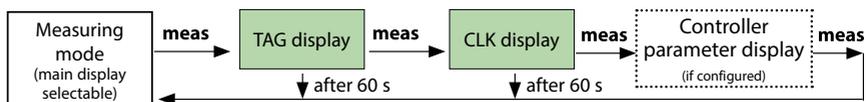

an alarm can be generated when the measured flow exceeds a specified range:

CONF/ALA/FLOW CNTR = ON

CONF/ALA/FLOW min (specify value, default: 5 liters/h)

CONF/ALA/FLOW max (specify value, default: 25 liters/h)

Pressing the **menu** key (down arrow) opens the selection menu.
 Select the menu group using the left/right arrow keys.
 Pressing **enter** opens a menu item. Press **meas** to return.

<div style="text-align: center;">  </div> <p>▶ DIAG</p>	<p>CALDATA Display of calibration data</p> <hr/> <p>SENSOR Display of sensor data</p> <hr/> <p>SELFTEST Self test: RAM, ROM, EEPROM, module</p> <hr/> <p>LOGBOOK 100 events with date and time</p> <hr/> <p>MONITOR Display of direct sensor values</p> <hr/> <p>VERSION Display of software version, model designation, serial no.</p>
<p>▶ HOLD</p>	<p>Manual activation of HOLD mode, e.g., for sensor replacement. The signal outputs behave as configured (e.g., last measured value, 21 mA)</p>
<p>▶ CAL</p>	<p>pH pH adjustment / ORP adjustment / product calibration</p> <hr/> <p>Oxy Adjustment (WTR/AIR) / zero adjustment / product cal.</p> <hr/> <p>COND(I) Adjustment with solution / cell factor input / prod. cal.</p> <hr/> <p>CAL_RTDT Adjustment of temperature probe</p>
<p>▶ CONF</p>	<p>PARSET A For configuring parameter set A / B</p> <hr/> <p>PARSET B see "Overview of Configuration" on next page.</p>
<p>▶ SERVICE (Access via code, factory setting: 5555)</p>	<p>MONITOR Display of measured values for validation (simulators)</p> <hr/> <p>SENSOR Sensor (resetting diagnostics messages)</p> <hr/> <p>POWER OUT Selecting the output voltage (3.1 V / 12 V / 15 V / 24 V)</p> <hr/> <p>OUT1 Current source, output 1</p> <hr/> <p>OUT2 Current source, output 2</p> <hr/> <p>RELAIS Relay test</p> <hr/> <p>CONTROL Controller: manual specification of controller output</p> <hr/> <p>CODES Specifying access codes for operating modes</p> <hr/> <p>DEVICE TYPE Selecting the device type</p> <hr/> <p>DEFAULT Reset to factory setting</p> <hr/> <p>OPTION Enabling an option via TAN</p>

The configuration steps are assigned to different menu groups. Using the left/right arrow keys, you can jump between the individual menu groups. Each menu group contains menu items for setting the parameters. Pressing **enter** opens a menu item. Use the arrow keys to edit a value. Press **enter** to confirm/save the settings. Return to measurement: Hold **meas** key depressed (> 2 s).

Select menu group	Menu group	Code	Display	Select menu item
	Sensor selection (multi-channel device: select sensor A / sensor B)	SNS: (S_A / S_B)	Conf SENSOR	
		Menu item 1		
		:		
		Menu item ...		
▶	Current Output 1	OT1:	Conf OUT 1	
▶	Current output 2	OT2:	Conf OUT 2	
▶	Compensation	COR:	Conf CORRECTION	
▶	Control input (parameter set or flow measurement)	IN:	0000 COR: TC L: BU: 1	
▶	Alarm mode	ALA:	Conf ALARM	
▶	Relay outputs	REL:	Conf REL 1/REL 2	
▶	Cleaning	WSH:	Conf WASH	
▶	Setting the clock	CLK:	Conf CLOCK	
▶	Tag number	TAG:	Conf TAG	

Note:

With Cond-Cond, the two parameter sets are replaced by the two sensors A and B.

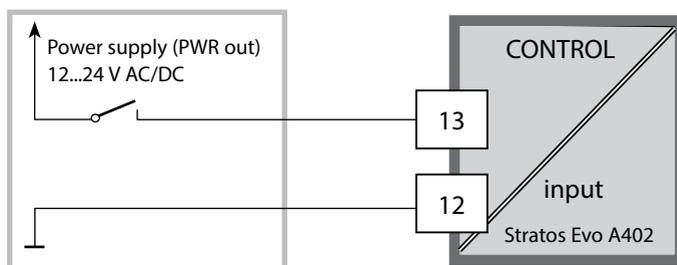

Parameter Set A/B: Configurable Menu Groups

The device provides 2 parameter sets "A" and "B". By switching between the parameter sets you can adapt the device to different measurement situations, for example. Parameter set "B" only permits setting of process-related parameters.

Menu group	Parameter set A	Parameter set B
SENSOR	Sensor selection	---
OUT1	Current output 1	Current output 1
OUT2	Current output 2	Current output 2
CORRECTION	Compensation	Compensation
CNTR_IN	Control input	---
ALARM	Alarm mode	Alarm mode
REL 1/REL 2	Relay outputs	Relay outputs
WASH	Cleaning (not for Cond-Cond devices)	---
PARSET	Parameter set selection (not for Cond-Cond devices)	---
CLOCK	Setting the clock	---
TAG	TAG of measuring point	
GROUP	GROUP of measuring points	

External switchover of parameter sets A/B

You can switch between parameter sets A and B by applying a signal to the CONTROL input (setting: CNTR-IN – PARSET).

Parameter set A active 0...2 V AC/DC

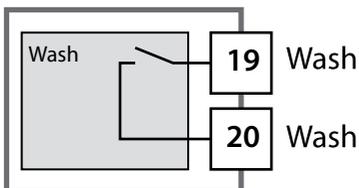

Parameter set B active 10...30 V AC/DC

Parameter Set A/B: Manual Switchover

Display	Action	Remark
	To switch between parameter sets: Press meas	Manual selection of parameter sets must have been preset in CONFIG mode. Default setting is a fixed parameter set A. Wrong settings change the measurement properties!
	PARSET blinks in the lower line. Select parameter set using ◀ and ▶ keys.	
	Select PARSET A / PARSET B	The currently active parameter set is read on the display: 
	Press enter to confirm. Cancel by pressing meas	

Parameter Set A/B: Signaling via WASH Contact

(not for device type CC)

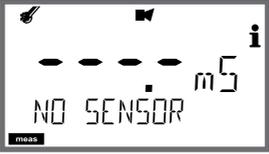

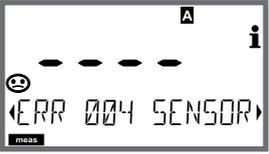

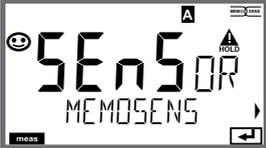

The active parameter set can be signaled using the WASH contact:

If configured correspondingly, the WASH contact signals:

Parameter set A: Contact open

Parameter set B: Contact closed

Step	Action/Display	Remark
Connect sensor		<p>First select "Sensor type Memosens" or "SE680-M" in the Configuration.</p> <p>Note: When no Memosens sensor is connected, the error message "NO SENSOR" is displayed.</p>
Wait until the sensor data are displayed.		<p>The hourglass in the display blinks.</p>
Check sensor data	 <p>View sensor information using ◀ ▶ keys, confirm using enter.</p>	<p>Sensoface is friendly when the sensor data are okay.</p>
Go to measuring mode	<p>Press meas, info or enter</p>	<p>After 60 sec the device automatically returns to measuring mode (timeout).</p>
Possible error message		
<p>Sensor defective. Replace sensor</p>		<p>When this error message appears, the sensor cannot be used. Sensoface is sad.</p>

Step	Action/Display	Remark
Select HOLD mode A sensor should only be replaced during HOLD mode to prevent unintended reactions of the outputs or contacts.	Press menu key to call the selection menu, select HOLD using the ◀ ▶ keys, press enter to confirm.	Now the device is in HOLD mode. The HOLD mode can also be activated externally via the HOLD input. During HOLD the output current is frozen at its last value or set to a fixed value.
Disconnect and remove old sensor		
Install and connect new sensor.		Temporary messages which are activated during the replacement are indicated but not output to the alarm contact and not entered in the logbook.
Wait until the sensor data are displayed.		
Check sensor data	 <p>View sensor information using ◀ ▶ keys, confirm using enter.</p>	You can view the sensor manufacturer and type, serial number and last calibration date.
Check measured values		
Exit HOLD	Hit meas key: Return to the selection menu. Hold meas key depressed: Device switches to measuring mode.

Cond

Device Type: Cond

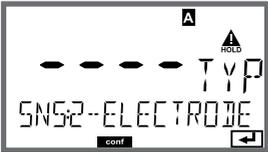

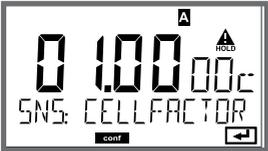

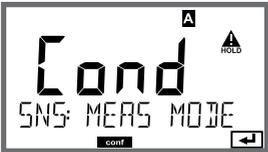

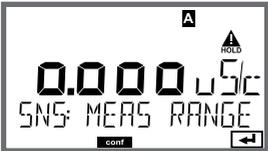

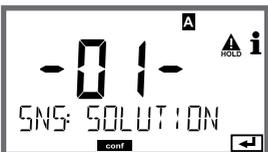

Connected modules are automatically recognized. When no module is installed, but a Memosens sensor is connected at initial start-up, it is recognized and the corresponding process variable is automatically selected. In the SERVICE menu you can change the device type. Afterwards, you must select the corresponding calibration mode in the CONF menu.

- 1 Press **menu**.
- 2 Select **CONF** using **◀ ▶**, press **enter**.
- 3 Select parameter set using **◀ ▶** keys, press **enter**.
- 4 Select **SENSOR** menu using **◀ ▶** keys, press **enter**.
- 5 All items of this menu group are indicated by the "SNS:" code. Press **enter** to select menu, edit using arrow keys (see next page). Confirm (and proceed) by pressing **enter**.
- 6 Exit: Press **meas** key until the [meas] mode indicator is displayed.

Cond

According to the "USP" directive (U.S.Pharmacopeia), Section 645 "Water Conductivity" the conductivity of pharmaceutical waters can be monitored online. To do so, the conductivity is measured without temperature compensation and is compared with limit values (see table on next page).

The water is usable when the conductivity is below the USP limit. If the conductivity values are higher, further test steps must be performed according to the directive. To increase safety, the USP limit value can be reduced in the device. To do so, a factor (%) is specified.

Configuration steps

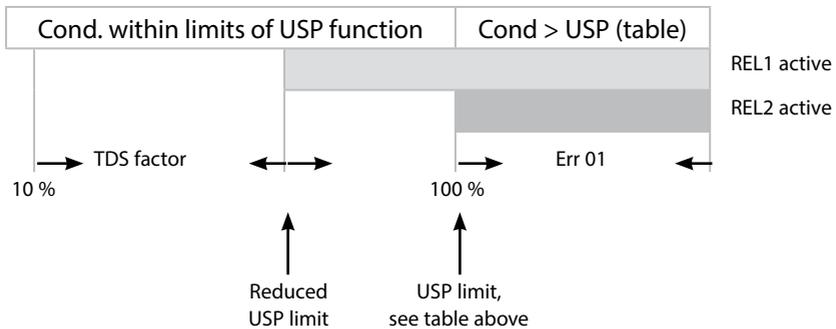

- **SNS** menu group:
When USP function has been selected, the measuring range is fixed to 00.00.....99.99 $\mu\text{S}/\text{cm}$. Temperature compensation is switched off.
Temperature is monitored.
- Access **REL** menu group and select USP FUNCT. as limit function.
Relays 1 and 2 can now be used as USP limit contacts.
- Reduced limit contact **REL1**:
Enter USP factor (reduced USP limit, configurable in the range 10 %...100 %).
Set contact response for relay 1.
Set delay time.
- Limit contact **REL2**:
REL 2 is permanently set to the USP limit (100%).
Set contact response for relay 2.
Set delay time.

Temperature/conductivity table as per USP

Temp (°C)	Cond (µS/cm)	Temp (°C)	Cond (µS/cm)
0	0.6	55	2.1
5	0.8	60	2.2
10	0.9	65	2.4
15	1.0	70	2.5
20	1.1	75	2.7
25	1.3	80	2.7
30	1.4	85	2.7
35	1.5	90	2.7
40	1.7	95	2.9
45	1.8	100	3.1
50	1.9

Sensor Verification (TAG, GROUP)

When Memosens sensors are calibrated in the lab, it is often useful and sometimes even mandatory that these sensors will be operated again at the same measuring points or at a defined group of measuring points. To ensure this, you can save the respective measuring point (TAG) or group of measuring points (GROUP) in the sensor. TAG and GROUP can be specified by the calibration tool or automatically entered by the transmitter. When connecting an MS sensor to the transmitter, it can be checked if the sensor contains the correct TAG or belongs to the correct GROUP. If not, a message will be generated, Sensoface gets "sad", and the display backlighting turns magenta (purple). The "sad" Sensoface icon can also be signaled by a 22 mA error current. Sensor verification can be switched on in the Configuration in two steps as TAG and GROUP if required.

When no measuring point or group of measuring points is saved in the sensor, e.g., when using a new sensor, Stratos enters its own TAG and GROUP. When sensor verification is switched off, Stratos always enters its own measuring point and group. A possibly existing TAG/GROUP will be overwritten.

Calculating the pH Value by Means of Dual Conductivity Measurement

When monitoring boiler feedwater in power plants, dual conductivity measurement can be used to calculate the pH value. For that purpose, the boiler feedwater conductance is measured before and after the cation exchanger. This commonly used method of indirect pH value measurement does not require much maintenance and has the following advantage:

Normal pH measurement in ultrapure water is very critical. Boiler feed water does not contain many ions. This requires the use of a special electrode, which must be calibrated constantly and the service life of which is generally rather short.

Function

Two sensors are used to measure the conductivity before and after the cation exchanger. The pH value is inferred from these two conductivity values.

- 1) The cell constant can be modified by an entry in the configuration menu or by calibration (one storage position). This means, a cell constant determined by calibration is taken over by pressing **enter** during configuration. It remains unchanged until a new value is entered.
- 2) For conductivity ($\mu\text{S}/\text{cm}$), the range selection determines the max. resolution. If the selected range is exceeded, the device automatically switches to the next higher range until the max. measurement limit is reached (9999 $\mu\text{S}/\text{cm}$). This applies to display values and current outputs. The current outputs are adjusted using a floating-point editor which allows settings over several decades. The initial range of the editor is the selected range:

Selected resolution	Displayed range (or floating-point editor)			
	x.xxx $\mu\text{S}/\text{cm}$	xx.xx $\mu\text{S}/\text{cm}$	x.xxx $\mu\text{S}/\text{cm}$	xxxx $\mu\text{S}/\text{cm}$

Monitoring the sensor lines for breakage

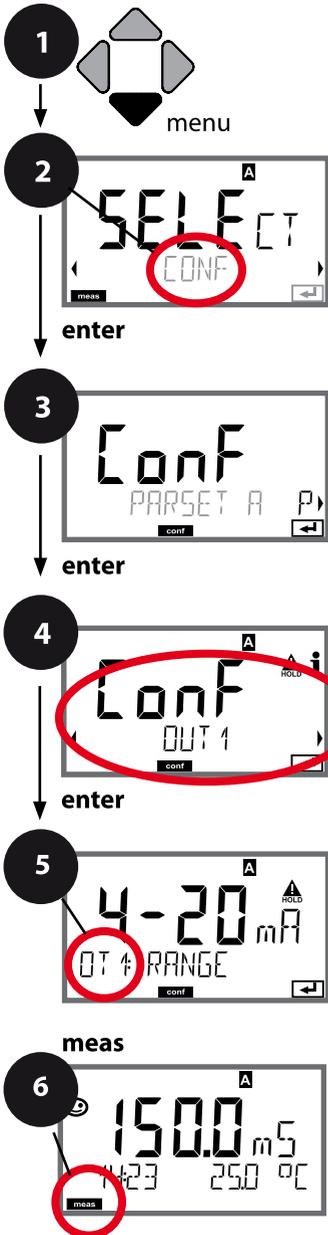

The sensor lines are monitored for breakage when the temperature is used for calculating the conductivity or concentration. If the sensor or line is broken, an alarm will be generated (output current FIX or 22 mA, depending on the configuration). If you want to output a conductivity value that is independent of the measured temperature (uncompensated), you can monitor the sensor lines for breakage by setting "TEMP CHECK" to "ON" in the Alarm menu.

Menu item	Action	Select
Output current curve 	Select using \uparrow \downarrow keys, confirm by pressing enter	LIN Linear characteristic biLIN Bilinear curve LOG Logarithmic curve
Current start and current end 	Enter value using \uparrow \downarrow \leftarrow \rightarrow keys. Press enter to confirm.	Entered value applies to selected process variable/range. If the adjusted range is exceeded, the device automatically switches to the next higher range (Autorange)
Bilinear curve: Vertex X/Y 	Enter value using \uparrow \downarrow \leftarrow \rightarrow keys. Press enter to confirm.	Entered value applies to selected vertex of bilinear curve "Corner X" (process variable) and "Corner Y" (output current) – see figure below.

Vertex of bilinear curve

Output current

Example:

Current range 4 ... 20 mA,

Current start: 0 $\mu\text{S}/\text{cm}$

Current end: 200 $\mu\text{S}/\text{cm}$

Vertex:

"CORNER X": 10 $\mu\text{S}/\text{cm}$ (process variable)

"CORNER Y": 12 mA (output current)

Result: The output current change in the range 0 ... 10 $\mu\text{S}/\text{cm}$ is much greater than in the range 10 ... 200 $\mu\text{S}/\text{cm}$.

Process variable
[$\mu\text{S}/\text{cm}$]

Output Current, Logarithmic Curve

Nonlinear output current characteristic: allows measurements over several decades, e.g., measuring very low values with a high resolution and high values with a low resolution.

Parameters required: Start and end value

Possible start and end values

The start value must be at least one decade lower than the end value. Start value and end value must be specified in the same units (either in $\mu\text{S/cm}$ or in S/m , see listing):

1.0 $\mu\text{S/cm}$	
10.0 $\mu\text{S/cm}$	0.001 S/cm
100.0 $\mu\text{S/cm}$	0.01 S/cm
1.0 mS/cm	0.1 S/cm
10.0 mS/cm	1.0 S/cm
100.0 mS/cm	10.0 S/cm
1000 mS/cm	100 S/cm

The start value

is the next decade value below the lowest measured value.

The end value

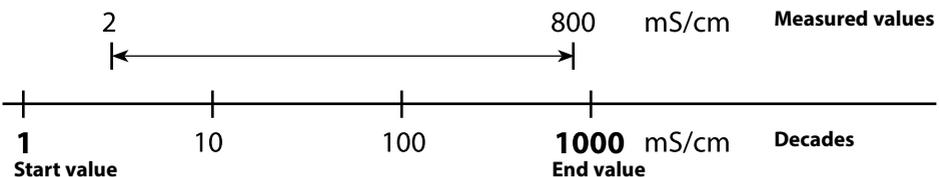

is the next decade value above the highest measured value.

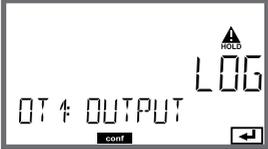

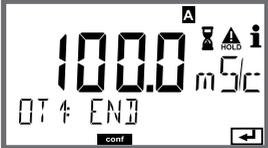

The number of decades results from:

Number of decades = $\log(\text{end value}) - \log(\text{start value})$

The output current value is defined as follows:

$$\text{Output current} = 16 \text{ mA} * \frac{\log(\text{measured value}) - \log(\text{start value})}{\text{Number of decades}} + 4 \text{ mA}$$

Menu item	Action	Select
Logarithmic curve Output current 	Select using \uparrow \downarrow keys, confirm by pressing enter	LOG Logarithmic curve biLIN Bilinear curve LIN Linear characteristic
Start value 	Enter value using \uparrow \downarrow \leftarrow \rightarrow keys. Press enter to confirm.	Start value of logarithmic output curve
End value 	Enter value using \uparrow \downarrow \leftarrow \rightarrow keys. Press enter to confirm.	End value of logarithmic output curve

Possible start and end values for the logarithmic curve

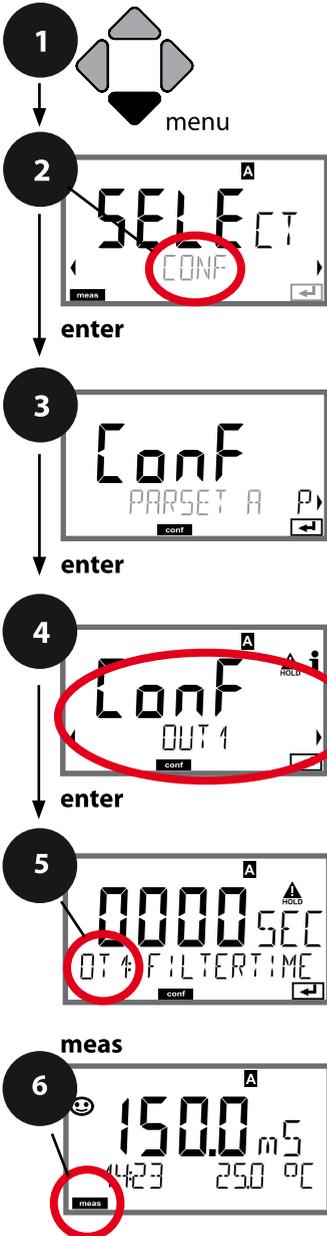

S/cm:

1.0 μ S/cm, 10.0 μ S/cm, 100.0 μ S/cm,
 1.0 mS/cm, 10.0 mS/cm, 100.0 mS/cm, 1000 mS/cm

Output current for HOLD FIX	

5

Menu item	Action	Select
Time averaging filter 	Enter value using ▲ ▼ ◀ ▶ keys. Press enter to confirm.	0...120 SEC (0000 SEC)

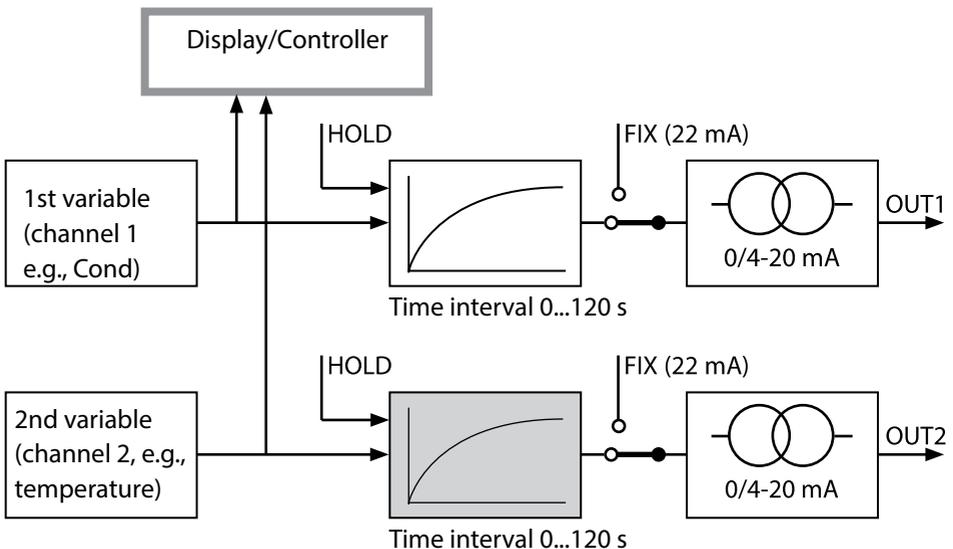

Time averaging filter

To smoothen the current output, a low-pass filter with adjustable filter time constant can be switched on. When there is a jump at the input (100 %), the output level is at 63 % after the time interval has been reached. The time interval can be set from 0 to 120 sec. If the time interval is set to 0 sec, the current output directly follows the input.

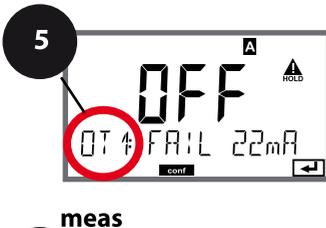

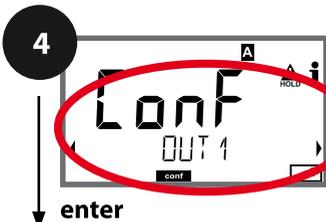

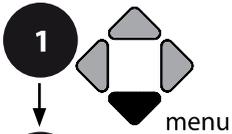

Note:

The filter only acts on the current output, not on the display, the limit values, or the controller!

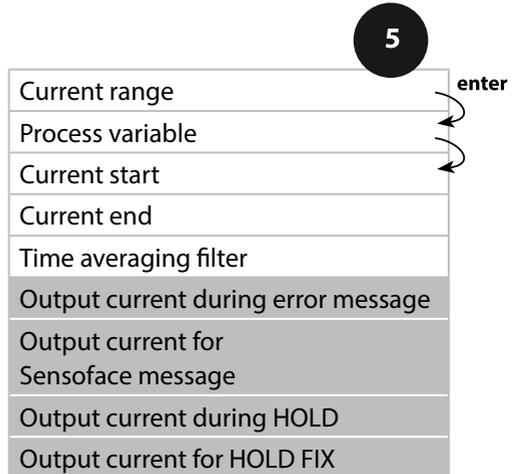

During HOLD the filter is not applied. This prevents a jump at the output.

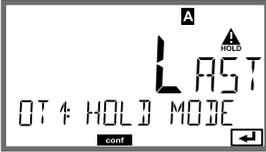

Output Current, Error and HOLD

- 1 Press **menu** key.
- 2 Select **CONF** using ◀ ▶, press **enter**.
- 3 Select parameter set using ◀ ▶ keys, press **enter**.
- 4 Select **OUT1** menu using ◀ ▶ keys, press **enter**.

Menu item	Action	Choices
Alarm delay 	Enter alarm delay using ▲ ▼ ◀ ▶ keys. Press enter to confirm.	0...600 SEC (010 SEC)
Sensocheck 	Select Sensocheck (continuous monitoring of lines). Select ON or OFF using ▲ ▼ keys. Press enter to confirm. (At the same time, Sensoface is activated. With OFF, Sensoface is also switched off.)	ON/OFF
Tempcheck (see page 90)	To monitor the temperature probe with TC OFF selected: Select Tempcheck ON using ▲ ▼ keys. Press enter to confirm. Now, the temperature probe will be monitored.	ON/OFF

Alarm Contact

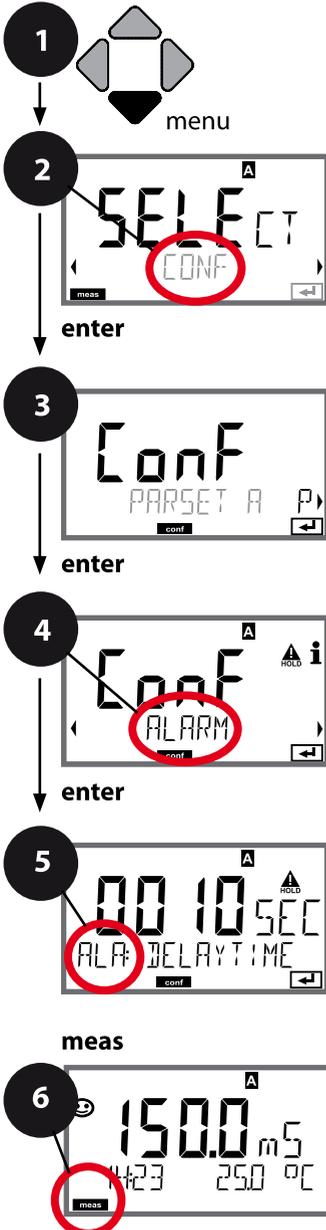

The alarm contact is closed during normal operation (N/C). It opens in the case of alarm or power outage. As a result, a failure message is output even in the case of line breakage (fail-safe behavior). For contact ratings, see Specifications.

Error messages can also be signaled by a 22-mA output current (see Error messages and Configuration Output 1/Output 2).

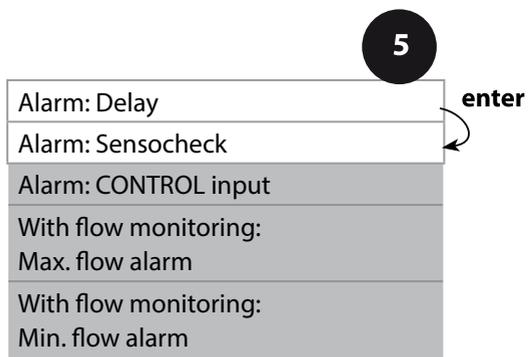

Operating behavior of the alarm contact: see Operating States table.

The alarm delay time delays the color change of the display backlighting to red, the 22-mA signal (if configured), and the alarm contact switching.

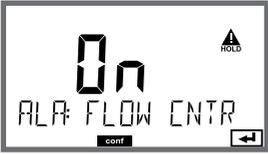

Alarm, CONTROL Input (FLOW MIN, FLOW MAX)

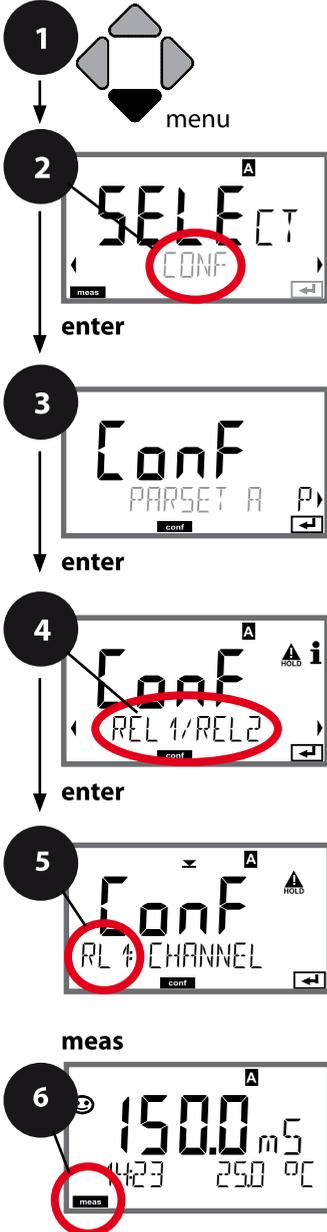

- 1 Press **menu** key.
- 2 Select **CONF** using ◀ ▶, press **enter**.
- 3 Select parameter set using ◀ ▶ keys, press **enter**.
- 4 Select **ALARM** menu using ◀ ▶ keys, press **enter**.
- 5 All items of this menu group are indicated by the "ALA:" code. Press **enter** to select menu, edit using arrow keys (see next page). Confirm (and proceed) by pressing **enter**.
- 6 Exit: Press **meas** key until the [meas] mode indicator is displayed.

5

Menu item	Action	Select
<p>CONTROL input</p> 	<p>The CONTROL input can generate an alarm when assigned to "FLOW" (flow monitoring) in the CONF menu: FLOW CNTR Flow measurement: allows monitoring the minimum and maximum flow (pulse counter)</p>	<p>ON/OFF (FLOW MIN, FLOW MAX.)</p>

Protective Wiring of Relay Contacts

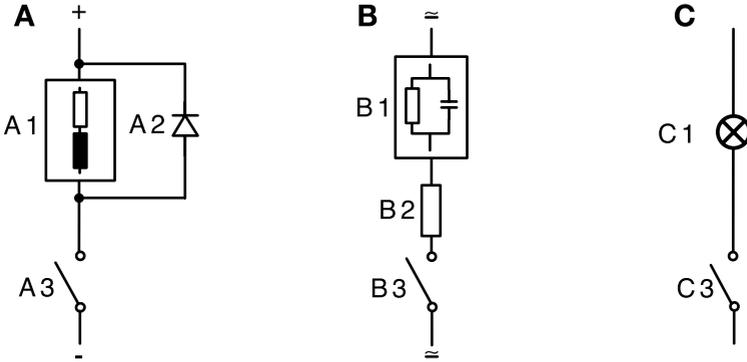

Relay contacts are subject to electrical erosion. Especially with inductive and capacitive loads, the service life of the contacts will be reduced. For suppression of sparks and arcing, components such as RC combinations, nonlinear resistors, series resistors and diodes should be used.

Typical AC applications with inductive load

- 1 Load
- 2 RC combination,
e.g., RIFA PMR 209
Typical RC combinations for
230 V AC:
capacitor 0.1 μF / 630 V,
resistor 100 Ω / 1 W
- 3 Contact

Typical Protective Wiring Measures

- A:** DC application with inductive load
- B:** AC/DC applications with capacitive load
- C:** Connection of incandescent lamps

- A1 Inductive load
- A2 Free-wheeling diode, e.g., 1N4007 (Observe polarity)
- A3 Contact
- B1 Capacitive load
- B1 Resistor, e.g., $8 \Omega / 1 \text{ W}$ at $24 \text{ V} / 0.3 \text{ A}$
- B3 Contact
- C1 Incandescent lamp, max $60 \text{ W} / 230 \text{ V}$, $30 \text{ W} / 115 \text{ V}$
- C3 Contact

WARNING!

Make sure that the maximum ratings of the relay contacts are not exceeded even during switching!

Typical Applications

P controller

Application for integrating control systems (e.g., closed tank, batch processes).

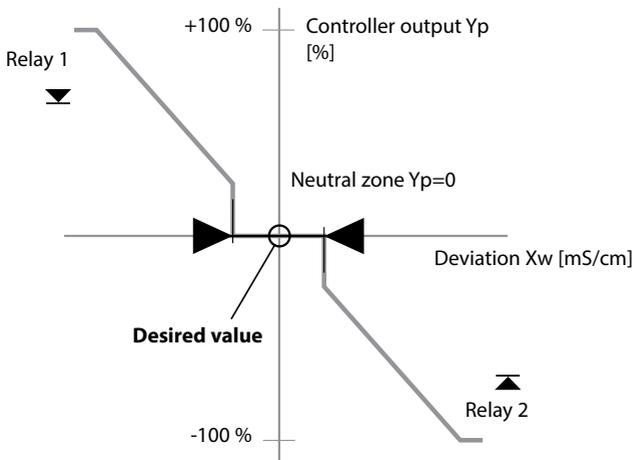

PI controller

Application for non-integrating control systems (e.g., drains).

PID controller

The additional derivative action compensates for measurement peaks.

Controller Characteristic

Controller Equations

$$\text{Controller output } Y = \underbrace{Y_P}_{\text{P action}} + \underbrace{\frac{1}{T_R} \int Y_P dt}_{\text{I action}} + \underbrace{T_D \frac{dY_P}{dt}}_{\text{D action}}$$

with:

- Y_P Proportional action
- T_N Reset time [s]
- T_D Rate time [s]
- K_C Controller gain [%]

Proportional action Y_P

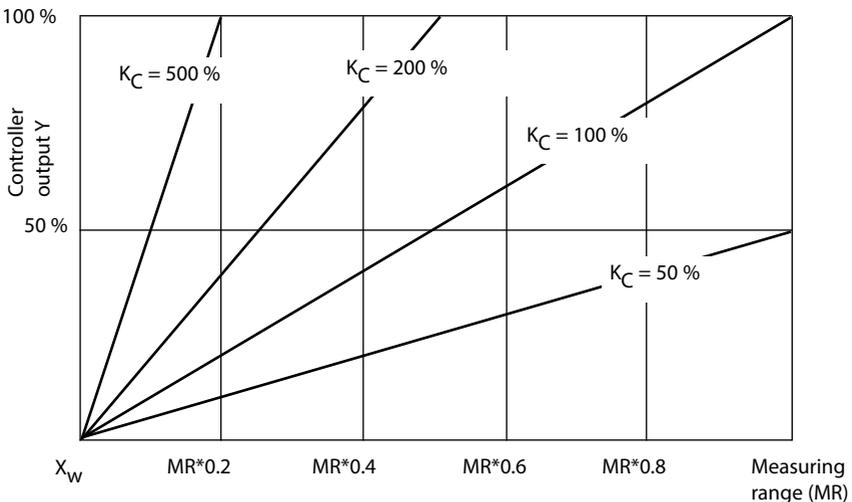

$$Y_P = \frac{\text{Setpoint} - \text{Meas. value}}{\text{Measuring range}} * K_C$$

Neutral Zone (Y=0)

Tolerated deviation from setpoint.

With the setting "1 mS/cm", for example, a deviation of ± 0.5 mS/cm from the setpoint does not activate the controller.

Proportional Action (Gradient K_C [%])

Deviation

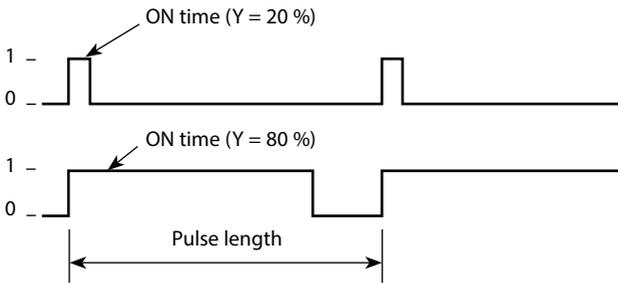

Process variables: Cond, Conc, SAL

Pulse Length / Pulse Frequency Controller

Pulse Length Controller (PLC)

The pulse length controller is used to operate a valve as an actuator. It switches the contact on for a time that depends on the controller output. The period is constant. A minimum ON time of 0.5 sec is maintained even if the controller output takes corresponding values.

Output signal (relay contact) of pulse length controller

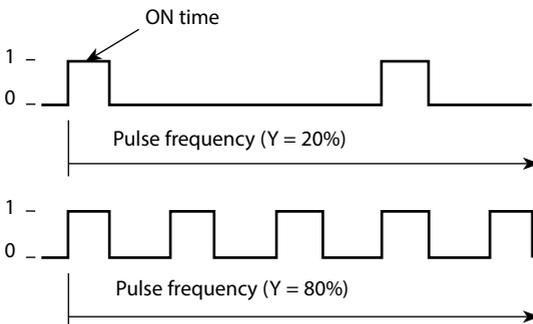

Pulse Frequency Controller (PFC)

The pulse frequency controller is used to operate a frequency-controlled actuator (metering pump). It varies the frequency with which the contacts are switched on. The maximum pulse frequency [pulses/min] can be defined. It depends on the actuator.

The contact ON time is constant. It is automatically calculated from the user-defined maximum pulse frequency:

Output signal (relay contact) of pulse frequency controller

PID controller and behavior during HOLD

The following setting can be made for the controller: HOLD MODE = Y LAST/Y OFF.

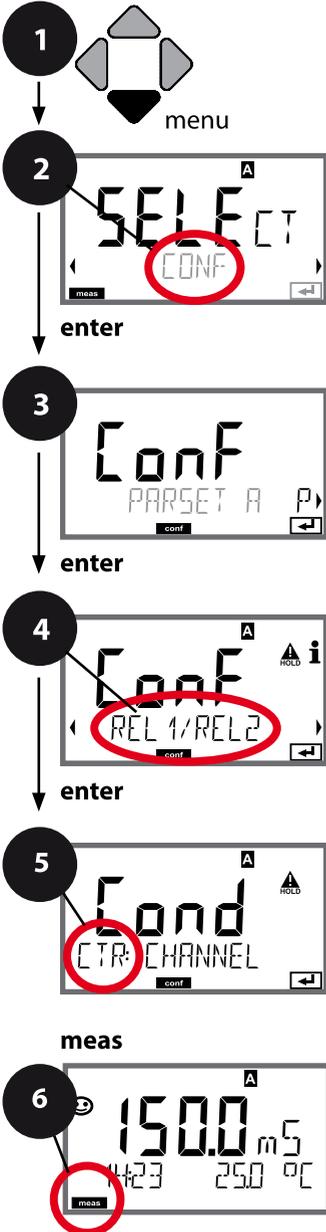

Y LAST: The controller output Y is maintained during HOLD

Y OFF: Y = 0 during HOLD (no control)

For a continuous (non-integrating) process, you should use the Y LAST setting.

For an integrating process (closed boiler), you should use Y OFF.

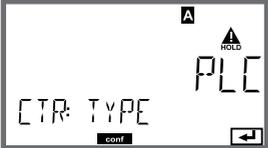

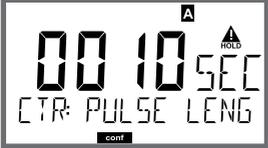

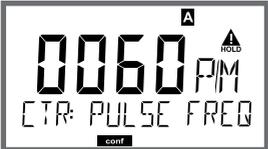

Controller, Process Variable, Controller Type, Setpoint

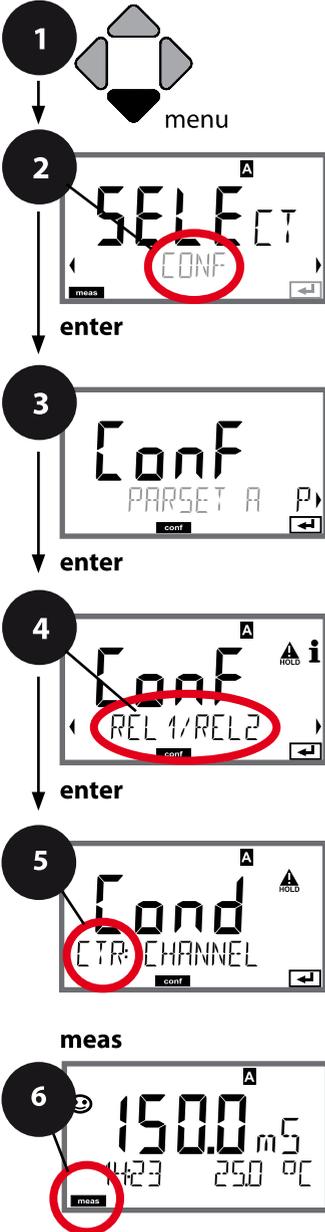

- 1 Press **menu** key.
- 2 Select **CONF** using ◀ ▶, press **enter**.

Time and Date

Control of the calibration and cleaning cycles is based on the time and date of the integrated real-time clock.

In measuring mode the time is shown in the lower display. When using digital sensors, the calibration data is written in the sensor head. In addition, the logbook entries (cf Diagnostics) are provided with a time stamp.

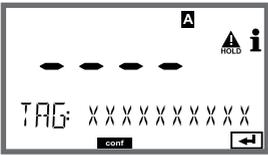

Note:

There is no automatic switchover from winter to summer time!
Be sure to manually adjust the time!

Sensor Verification (TAG, GROUP)

When Memosens sensors are calibrated in the lab, it is often useful and sometimes even mandatory that these sensors will be operated again at the same measuring points or at a defined group of measuring points. To ensure this, you can save the respective measuring point (TAG) or group of measuring points (GROUP) in the sensor. TAG and GROUP can be specified by the calibration tool or automatically entered by the transmitter. When connecting an MS sensor to the transmitter, it can be checked if the sensor contains the correct TAG or belongs to the correct GROUP. If not, a message will be generated, Senseface gets "sad", and the display backlighting turns magenta (purple). The "sad" Senseface icon can also be signaled by a 22 mA error current. Sensor verification can be switched on in the Configuration in two steps as TAG and GROUP if required.

When no measuring point or group of measuring points is saved in the sensor, e.g., when using a new sensor, Stratos enters its own TAG and GROUP. When sensor verification is switched off, Stratos always enters its own measuring point and group. A possibly existing TAG/GROUP will be overwritten.

Menu item	Action	Choices
<p>TAG of measuring point</p> 	<p>In the lower display line you can enter a designation for the measuring point (TAG) and for a group of measuring points (GROUP) if applicable. Up to 32 digits are possible. By pressing meas (repeatedly) in the measuring mode you can view the tag number. Select character using ▲ ▼ keys, select next digit using ◀ ▶ keys. Press enter to confirm.</p>	<p>A...Z, 0...9, - + < > ? / @</p> <p>The first 10 characters are seen in the display without scrolling.</p>
<p>GROUP of measuring points</p>	<p>Select number using ▲ ▼ keys, select next digit using ◀ ▶ keys. Confirm by pressing enter</p>	<p>0000 ... 9999 (0000)</p>

Note:

- All calibration procedures must be performed by trained personnel. Incorrectly set parameters may go unnoticed, but change the measuring properties.

Calibration can be performed by:

- determining the cell constant (cell factor for toroidal sensors) with a known calibration solution
- entering the cell constant (cell factor for toroidal sensors)
- sampling (product calibration)
- zero calibration in air or with calibration solution (toroidal sensors)
- temperature probe adjustment

Selecting a Calibration Mode for 2-/4-Electrode Sensors

Calibration adapts the device to the individual sensor characteristics.

Access to calibration can be protected with a passcode (SERVICE menu).

First, you open the calibration menu and select the calibration mode:

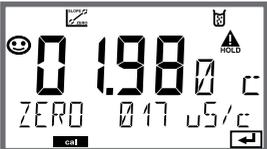

CAL_SOL	Calibration with calibration solution
CAL_CELL	Calibration by entry of cell constant
P_CAL	Product calibration (calibration with sampling)
CAL_RTD	Temperature probe adjustment

Selecting a Calibration Mode for Toroidal Sensors

CAL_SOL	Calibration with calibration solution
CAL_CELL	Calibration by input of cell factor
P_CAL	Product calibration (calibration with sampling)
CAL_ZERO	Zero calibration
CAL_RTD	Temperature probe adjustment

134 Calibration with Calibration Solution

Input of temperature-corrected value of calibration solution with simultaneous display of cell constant (cell factor for toroidal sensors).

Display	Action	Remark
	<p>Select Calibration. Press enter to proceed. Select CAL_SOL calibration method. Press enter to proceed.</p>	
	<p>Ready for calibration. Hourglass blinks.</p>	<p>Display (3 sec) Now the device is in HOLD mode.</p>
	<p>Immerse sensor in cali- bration solution. Enter the temperature-corrected value of the calibration solution using the arrow keys (see table). Press enter to confirm.</p>	<p>Lower line: display of cell constant (cell factor) and temperature</p>
	<p>Contacting conductivity measurement (Cond) The determined cell constant is displayed. The "hourglass" icon is blinking. Proceed by pressing enter</p>	
	<p>Inductive conductivity measurement (CONDI) The determined cell factor and zero point are displayed. The "hourglass" icon is blinking. Proceed by pressing enter</p>	

Display	Action	Remark
 <p>The display shows a large number '1265' followed by 'mS/cm'. Below it, 'MEAS' and 'REPEAT' are visible. There are also 'HOLD' and 'i' icons in the top right corner, and a 'cal' indicator in the bottom left.</p>	<p>Display of selected process variable (here: mS/cm). Now the device is in HOLD mode: Reinstall the sensor and check whether the measurement is OK. MEAS exits calibration, REPEAT permits repetition.</p>	
 <p>The display shows '1265 mS/cm' and 'GOOD BYE' with dashes on either side. The 'MEAS' indicator is in the bottom left corner.</p>	<p>With MEAS selected: Press enter to exit calibration.</p>	<p>Display of conductivity and temperature, Senso-face is active. After end of calibration, the outputs remain in HOLD mode for a short time. After display of GOOD BYE, the device automatically returns to measuring mode.</p>

Please note:

- Be sure to use known calibration solutions and the respective temperature-corrected conductivity values (see “Calibration Solutions” tables).
- Make sure that the temperature does not change during the calibration procedure.

Calibration by sampling – for product calibration, the uncompensated conductivity ($\mu\text{S}/\text{cm}$, mS/cm , S/m) is used.

During product calibration the sensor remains in the process. The measurement process is only interrupted briefly.

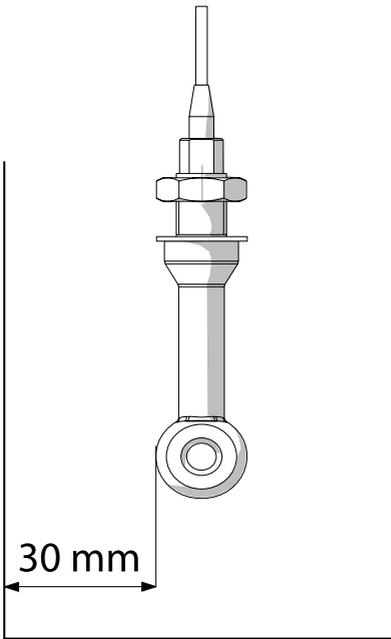

Procedure:

- 1) The sample is measured in the lab or directly on the site using a portable meter. To ensure an exact calibration, the sample temperature must correspond to the measured process temperature. During sampling the analyzer saves the currently measured value and then returns to measuring mode. Then, the “calibration” mode indicator blinks.
- 2) In the second step you enter the measured sample value in the device. From the difference between the stored measured value and entered sample value, the device calculates the new cell constant (the new cell factor for toroidal sensors). If the sample is invalid, you can take over the value stored during sampling. In that case, the old calibration values are stored. Afterwards, you can start a new product calibration.

Display	Action	Remark
	Select Calibration. Press enter to proceed. Select P_CAL calibration method. Press enter to proceed.	
	Ready for calibration. Hourglass blinks.	Display (3 sec) Now the device is in HOLD mode.
	Take sample and save value. Press enter to proceed.	Now the sample can be measured in the lab.

Display	Action	Remark
	The device returns to measuring mode.	From the blinking CAL mode indicator, you see that product calibration has not been terminated.
	Product calibration step 2: When the sample value has been determined, open the product calibration once more	Display (3 sec) Now the device is in HOLD mode.
	The stored value is displayed (blinking) and can be overwritten with the lab value. Press enter to proceed.	
	Display of new cell constant / cell factor (based on 25°C). Sensoface is active. To exit calibration: Select MEAS, then enter	To repeat calibration: Select REPEAT, then enter
	End of calibration	After end of calibration, the outputs remain in HOLD mode for a short time.

Display	Action	Remark
	Select Calibration. Press enter to proceed. Select CAL_RTD calibration method. Press enter to proceed.	Wrong settings change the measurement properties!
	Measure the temperature of the process medium using an external thermometer.	Display (3 sec) Now the device is in HOLD mode.
	Enter the measured temperature value. Maximum difference: 10 K. Press enter to proceed.	Display of actual temperature (uncompensated) in the lower display.
	The corrected temperature value is displayed. Sensoface is active. To exit calibration: Select MEAS, then enter To repeat calibration: Select REPEAT, then enter	After end of calibration, the outputs remain in HOLD mode for a short time.
	After calibration is ended, the device will switch to measuring mode.	

Please note:

When the sensor is installed in a pipe/tank at a distance less than 30 mm from the wall, you should perform the calibration either by means of sampling (product calibration) with the sensor installed or in a suitable calibration beaker with dimensions and material corresponding to the process conditions.

Condi

Calibration by input of cell factor (toroidal sensors)

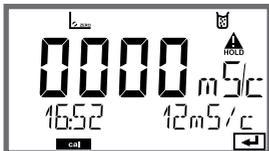

You can directly enter the value for the cell factor of a sensor. The value must be known, eg, determined beforehand in the laboratory. The selected process variable and the temperature are displayed. This method is suitable for all process variables.

Display	Action	Remark
	Select Calibration. Press enter to proceed. Select CAL_CELL calibration method. Press enter to proceed.	
	Ready for calibration. Hourglass blinks.	Display (3 sec) Now the device is in HOLD mode.
	Enter cell factor. Press enter to proceed.	The selected process variable and the temperature are displayed.
	The device shows the calculated cell factor and zero point (at 25 °C). Sensoface is active.	
	Use the arrow keys to select: • MEAS (exit) • REPEAT Press enter to proceed.	Exit: HOLD is deactivated after a short time.

Please refer to the Specifications for the nominal cell factor.

When measuring in a restricted space, the individual cell factor must be determined.

Zero calibration in air / with calibration solution (toroidal sensors)

Display	Action	Remark
	<p>Select Calibration. Press enter to proceed. Select CAL_ZERO calibration method. Press enter to proceed.</p>	
	<p>Ready for calibration. Hourglass blinks.</p>	<p>Display (3 sec) Now the device is in HOLD mode.</p>
	<p>Calibration in air Edit digits until the lower display indicates Zero. Calibration in air (AIR-SET) for SE680-M and Memosens sensors: Press enter to start AIR-SET. When zero point and cell factor are displayed, press enter to confirm.</p>	
	<p>The device shows the cell factor (at 25 °C) and the zero point. Sensoface is active.</p>	
	<p>Use the arrow keys to select:</p> <ul style="list-style-type: none"> • MEAS (exit) • REPEAT <p>Press enter to proceed.</p>	<p>Exit: HOLD is deactivated after a short time.</p>

Display

or AM/PM and °F:

Remark

From the configuration or calibration menus, you can switch the device to measuring mode by pressing the **meas** key.

In the measuring mode the upper display line shows the configured process variable (Cond or temperature), the lower display line shows the time and the second configured process variable (Cond or temperature). The [meas] mode indicator lights and the active parameter set (A/B) is indicated. A/B is not displayed with parameter set Fix A.

Note:

- After prolonged power outage (> 5 days), the time display is replaced by dashes and cannot be used for processing. In that case, enter the correct time and the correct date.

By pressing the **meas** key you can step through the following displays. When no key has been pressed for 60 sec, the device returns to the standard display.

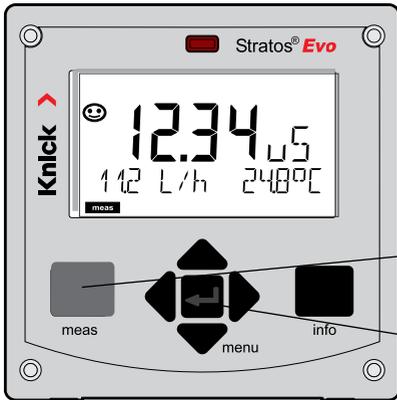

- 1) Selecting the parameter set (if set to "manual" in the configuration).
Select the desired parameter set using the ◀ ▶ arrow keys (PARSET A or PARSET B blinks in the lower display line). Press **enter** to confirm.

Further displays (each by pressing **meas**).

- 2) Display of tag number ("TAG")
- 3) Display of time and date
- 4) Display of output currents

The MAIN DISPLAY is the display which is shown in measuring mode. To call the measuring mode from any other mode, hold the **meas** key depressed for at least 2 sec.

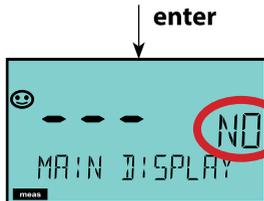

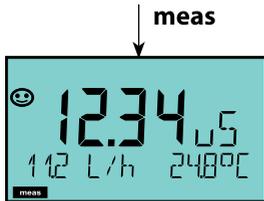

meas key

enter key

By pressing **meas** briefly you can step through further displays such as tag number (TAG) or flow (L/h).

These displays are turquoise. After 60 sec they switch back to the main display.

Press **enter** to select a display as MAIN DISPLAY.

The secondary display shows "MAIN DISPLAY – NO".

Use the **UP / DOWN** arrows to select "MAIN DISPLAY – YES"

and confirm by pressing **enter**.

The display color changes to white.

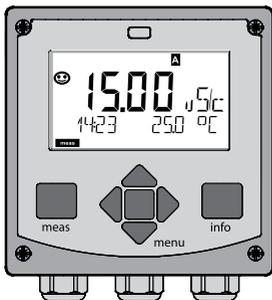

This display is now shown in measuring mode.

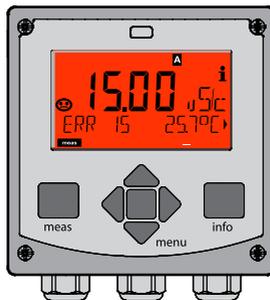

The color-coded user interface guarantees increased operating safety. Operating modes are clearly signaled.

The normal measuring mode is white. Information text appears on a green screen and the diagnostic menu appears on turquoise. The orange HOLD mode (e.g., during calibration) is quickly visible as is the magenta screen which indicates asset management messages for predictive diagnostics – such as maintenance request, pre-alarm and sensor wear.

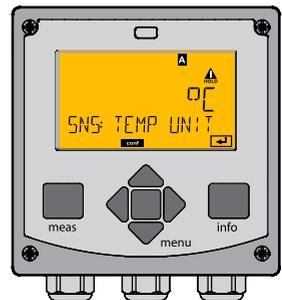

The alarm status has a particularly noticeable red display color and is also signaled by flashing display values. Invalid inputs or false passcodes cause the entire display to blink red so that operating errors are significantly reduced.

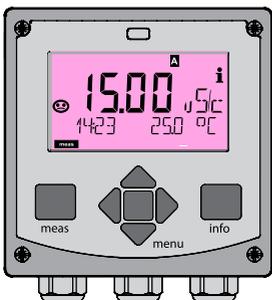

White:
Measuring mode

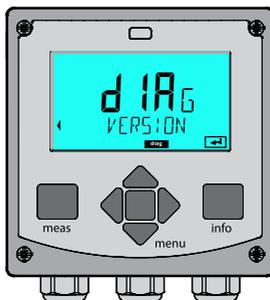

Red blinking:
Alarm, error

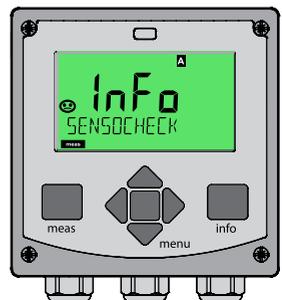

Orange:
HOLD mode

Magenta:
Maintenance request

Turquoise:
Diagnostics

Green:
Info texts

Display**Remark****With activated controller**

you can also step through the following displays by pressing the **meas** key. When no key has been pressed for 60 sec, the device returns to the standard display.

Upper display: Controller output Y

The controller output can be modified using ▲ ▼ .

This allows control systems to be tested and, above all, started smoothly.

Lower display: Setpoint

Depending on configuration setting:
conductivity or temperature.

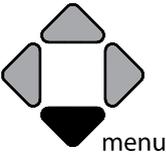

In the Diagnostics mode you can access the following menus without interrupting the measurement:

- CALDATA Viewing the calibration data
- SENSOR Viewing the sensor data
- SELFTEST Starting a device self-test
- LOGBOOK Viewing the logbook entries
- MONITOR Displaying currently measured values,
Remaining capacity of the ion exchanger
- VERSION Displaying device type, software version, serial number

Access to diagnostics can be protected with a passcode (SERVICE menu).

Note:

HOLD is not active during Diagnostics mode!

Action	Key	Remark
Activate diagnostics		Press menu key to call the selection menu. (Display color changes to turquoise.) Select DIAG using ◀ ▶ keys, confirm by pressing enter
Select diagnostics option		Use ◀ ▶ keys to select from: CALDATA SENSOR SELFTEST LOGBOOK MONITOR VERSION See next pages for further proceeding.
Exit	meas	Exit by pressing meas .

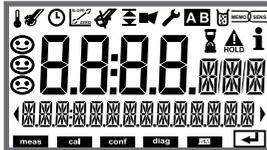

Display**Menu item****Display of calibration data**

Select CALDATA using ◀ ▶, confirm by pressing **enter**. Use the ◀ ▶ keys to select the desired parameter from the bottom line of the display:

The selected parameter is shown in the upper display line.

Press **meas** to return to measurement.

Device self-test

(To abort, you can press **meas**.)

- 1) **Display test:** Display of all segments with changing background colors (white/green/red). Proceed by pressing **enter**
- 2) **RAM test:** Hourglass blinks, then display of --PASS-- or --FAIL-- Proceed by pressing **enter**
- 3) **EEPROM test:** Hourglass blinks, then display of --PASS-- or --FAIL-- Proceed by pressing **enter**
- 4) **FLASH test:** Hourglass blinks, then display of --PASS-- or --FAIL-- Proceed by pressing **enter**
- 5) **Module test:** Hourglass blinks, then display of --PASS-- or --FAIL-- Return to measuring mode by pressing **enter** or **meas**

Display

Menu item

Displaying the logbook entries

Select LOGBOOK using ◀ ▶, press **enter** to confirm.

With the ▲ ▼ keys, you can scroll backwards and forwards through the logbook (entries -00-...-99-), -00- being the last entry.

If the display is set to date/time, you can search for a particular date using the ▲ ▼ keys.

Press ◀ ▶ to view the corresponding message text.

If the display is set to the message text, you can search for a particular message using the ▲ ▼ keys.

Press ◀ ▶ to display the date and time.

Press **meas** to return to measurement.

Extended logbook / Audit Trail (via TAN)

With the ▲ ▼ keys, you can scroll backwards and forwards through the extended logbook (entries -000-...-99-), -000- being the last entry.

Display: CFR

Audit Trail also records function activations (CAL CONFIG SERVICE), some Sensoface messages (cal timer, wear), and opening of the enclosure.

Display

Display example:

Remaining capacity
of the ion exchanger

Menu item

Displaying the currently measured values (sensor monitor)

Select MONITOR using ◀ ▶, press **enter** to confirm.

Use the ◀ ▶ keys to select the desired parameter from the bottom line of the display (R_COND G_COND RTD TEMP I-INPUT (Option)).

The selected parameter is shown in the upper display line.

When calculating the consumption of the ion exchanger has been activated in the configuration, the sensor monitor shows the remaining capacity of the ion exchanger.

Press **meas** to return to measurement.

Version

Display of **device type, software/hardware/boot-loader version** and **serial number** for all device components.

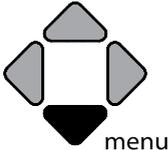

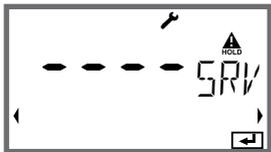

Use the ▲ ▼ keys to switch between software and hardware version. Press **enter** to proceed to next device component.

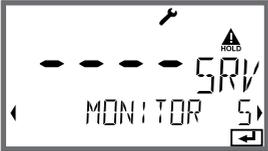

In the Service mode you can access the following menus:

MONITOR	Displaying currently measured values
NEW EXCHANGER	Resetting the consumption calculation after replacement of ion exchanger
POWER OUT	Power output (adjustable: 3.1/12/15/24 V)
OUT1	Testing current output 1
OUT2	Testing current output 2
RELAIS	Testing the function of the 4 relays
CONTROL	Testing the controller function
CODES	Assigning and editing passcodes
DEVICE TYPE	Selecting the measuring function
DEFAULT	Resetting the device to factory settings
OPTION	Enabling options via TAN

Note:

HOLD is active during Service mode!

Action	Key/Display	Remark
Activate Service		Press menu key to call the selection menu. Select SERVICE using ◀ ▶ keys, press enter to confirm.
Passcode		Enter passcode "5555" for service mode using the ▲ ▼ ◀ ▶ keys. Press enter to confirm.
Display		In service mode the following icons are displayed: <ul style="list-style-type: none"> • HOLD triangle • Service (wrench)
Exit	meas	Exit by pressing meas .

Menu item	Remark
 <p>The LCD display shows a top line with a wrench icon and a 'HOLD' icon. Below that, a horizontal line of dashes is followed by '5.0V'. The second line displays 'MONITOR' with left and right arrow keys. A 'HOLD' icon is also present in the bottom right corner.</p>	<p>Displaying currently measured values (sensor monitor) with HOLD mode activated:</p> <p>Select MONITOR using ◀ ▶, press enter to confirm. Select variable in the bottom text line using ◀ ▶. The selected parameter is shown in the upper display line.</p> <p>As the device is in HOLD mode, you can perform validations using simulators without influencing the signal outputs.</p> <p>Hold meas depressed for longer than 2 sec to return to Service menu. Press meas once more to return to measurement.</p>
<p>NEW EXCHANGER</p>  <p>The LCD display shows 'NEW EXCHANGER' on the bottom line. The top line has a wrench icon and a 'HOLD' icon. The second line shows 'YES' with left and right arrow keys. A 'HOLD' icon is also present in the bottom right corner.</p>	<p>When you have replaced the ion exchanger, select "YES" to reset the consumption calculation.</p>
<p>POWER OUT</p>  <p>The LCD display shows 'POWER OUT' on the bottom line. The top line has a wrench icon and a 'HOLD' icon. The second line shows '15' with left and right arrow keys. A 'HOLD' icon is also present in the bottom right corner.</p>	<p>POWER OUT, adjusting the output voltage</p> <p>Here, you can select an output voltage of 3.1/12/15/24 V.</p>

Menu item

Remark

Specifying the current for outputs 1 and 2:

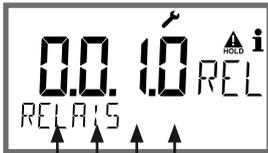

Select OUT1 or OUT2 using the ◀ ▶ keys, press **enter** to confirm.

Enter a valid current value for the respective output using ▲ ▼ ◀ ▶ keys.

Confirm by pressing **enter**.

For checking purposes, the actual output current is shown in the bottom right corner of the display.

Exit by pressing **enter** or **meas**.

REL1
REL2
ALARM
WASH

Relay test (manual test of contacts):

Select RELAIS using ◀ ▶, press **enter** to confirm.

Now the status of the 4 relays is "frozen". The 4 digits of the main display represent the respective states (from left to right: REL1, REL2, ALARM, WASH).

The digit for the selected relay blinks.

Select one of the 4 relays using the ◀ ▶ keys, close (1) or open (0) using the ▲ ▼ keys.

Exit by pressing **enter**.

The relays will be re-set corresponding to the measured value.

Press **meas** to return to measurement.

Menu item	Remark
	<p>Assigning passcodes: In the "SERVICE - CODES" menu you can assign passcodes to DIAG, HOLD, CAL, CONF and SERVICE modes (Service preset to 5555).</p> <p>When you have lost the Service passcode, you have to request an "Ambulance TAN" from the manufacturer specifying the serial number and hardware version of your device. To enter the "Ambulance TAN", call the Service function and enter passcode 7321. After correct input of the ambulance TAN the device signals "PASS" for 4 sec and resets the Service passcode to 5555.</p>
	<p>Reset to factory settings: In the "SERVICE - DEFAULT" menu you can reset the device to factory settings.</p> <p>NOTICE! After a reset to factory setting the device must be reconfigured completely, including the sensor parameters!</p>
	<p>Option request: Communicate the serial number and hardware/software version of your device to the manufacturer. These data can be viewed in the Diagnostics/Version menu. The "transaction number" (TAN) you will then receive is only valid for the device with the corresponding serial number.</p> <p>Releasing an option: Options come with a "transaction number" (TAN). To release the option, enter this TAN and confirm by pressing enter.</p>
	<p>Device type: Changing the measuring function, e.g., after having replaced a Memosens sensor. Not possible with a measuring module installed.</p>

Power Disruption while Loading the Process Variable

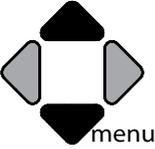

In very rare cases it seems that the analyzer cannot be operated because it remains in "Firmware Update" mode – indicated by the --FIRMWARE UPDATE-- message.

This occurs when the power is disrupted while the process variable is loaded.

Follow the instructions below to fix the error.

--FIRMWARE UPDATE--

Action	Key/Display	Remark
Device start		If the power supply is disrupted while the process variable is loaded (e.g., during initial start-up or when changing the process variable), the following can occur:
Reconnecting the power supply		After the power supply has been reconnected, the analyzer starts and then remains in --FIRMWARE UPDATE-- mode. If this occurs, disconnect the power supply.
Restoring the factory settings		Press the ▲ ▼ keys simultaneously and hold them depressed while the analyzer is reconnected to the power supply.
Device start		Release the keys when the display shows LOADING BASE. The analyzer will restart with the BASE software when 100 % is reached.

Action	Key/Display	Remark
Searching for the process variable		Then the analyzer searches for a measuring module or Memosens sensor.
Loading the process variable, automatic		When a module or a sensor has been found, the loading progress is shown in percentages.
Loading the process variable, manual		If neither module nor sensor are found, the display shows DEVICE TYPE. The selected process variable blinks. You can modify it using the ▲ ▼ keys. Press enter to load the process variable displayed.
Loading ...		Make sure that the power supply is not interrupted before the process variable is fully loaded (100%) .

Error	Info text (is displayed in case of fault when the Info key is pressed)	Problem Possible causes

Sensoface messages:

Cell factor monitoring	SENSOR CELL FACTOR CALIBRATE OR CHANGE SENSOR
Table monitoring (TC/Conc/Sal/USP)	OUT OF INTERNAL TABLE
Zero point monitoring	SENSOR ZERO CALIBRATE OR CHANGE SENSOR
Cell factor / zero point monitoring	SENSOR ZERO/CELL FACTOR CALIBRATE OR CHANGE SENSOR
Sensor TAG does not correspond to device entry.	WRONG SENSOR TAG
Sensor GROUP does not correspond to device entry.	WRONG SENSOR GROUP xxxx

Sensocheck, Sensoface Sensor Monitoring

Sensocheck continuously monitors the sensor and its wiring. The three Sensoface indicators provide information on required maintenance of the sensor. Additional icons refer to the error cause. Pressing the **info** key shows an information text.

Note:

The worsening of a Sensoface criterion leads to the devaluation of the Sensoface indicator (Smiley gets “sad”). An improvement of the Sensoface indicator can only take place after calibration or removal of the sensor defect.

Sensoface message

The Sensocheck message is also output as error message Err 15.

The alarm contact is active, the display backlighting turns red (when configured correspondingly).

Sensoface can be output as a 22-mA signal via the current outputs.

Disabling Sensocheck and Sensoface

Sensocheck can be switched off in the configuration menu (then Sensoface is also disabled).

Exception:

After a calibration, a smiley is always displayed for confirmation.

Monitoring function for device type Cond-Cond

When the remaining capacity of the ion exchanger is at 20 %, the wrench icon is displayed to indicate a maintenance request together with the “CATION EXCHANGER CAPACITY” info message.

When capacity is depleted (0%),

the **ERR 110** error message is displayed in addition.

Without Sensoface!

	Overrange*	22 mA in the case of error messages	
	Characteristic	Linear, bilinear, logarithmic	
	Output filter*	PT ₁ filter, time constant 0 ... 120 s	
	Measurement error ¹⁾	< 0.25% current value + 0.025 mA	
	Start/end of scale*	Configurable within the measuring range of the selected process variable	

Power Out	Power output, e.g., for supplying additional transmitters or relay contacts (signal evaluation via I input) Power supply	Selectable between 3.1 V / 12 V / 15 V / 24 V, short-circuit-proof Power max. 1 W
Alarm contact	Relay contact, floating Contact ratings Contact response Response delay*	AC < 250 V / < 3 A / < 750 VA DC < 30 V / < 3 A / < 90 W N/C (fail-safe type) 0 ... 600 s
Wash contact or parameter set A/B	Relay contact, floating Contact ratings Contact response* Wash contact* ¹⁾ Cleaning Parameter set A/B Contact response	AC < 250 V / < 3 A / < 750 VA DC < 30 V / < 3 A / < 90 W N/C or N/O Interval 0.0 ... 999.9 h (0.0 h = cleaning function switched off) 0 ... 1999 s Signaling parameter set A/B Contact open: Parameter set A active Contact closed: Parameter set B active
Min/max limits	Min/max contacts, floating, but inter-connected Contact ratings Contact response* Response delay* Setpoints* Hysteresis*	AC < 250 V / < 3 A / < 750 VA DC < 30 V / < 3 A / < 90 W N/C or N/O 0 ... 9999 s As desired within range User-defined
PID process controller	Output via limit contacts Setpoint specification* Neutral zone Cond / Condl* Proportional action* Integral action* Derivative action* Controller type* Pulse period* Max. pulse frequency*	Within selected range Max. 50 % of selected range / 0 ... 50 K Controller gain Kp: 10 ... 9999 % Reset time Tr: 0 ... 9999 s (0 s = no integral action) Rate time Td: 0 ... 9999 s (0 s = no derivative action) Pulse length controller or pulse frequency controller 1 ... 600 s, min. turn-on time 0.5 s (pulse length controller) 1 ... 180/min (pulse frequency controller)

Real-time clock	Different time and date formats selectable
	Power reserve > 5 days
Display	LC display, 7-segment with icons, colored backlighting
	Primary display Character height approx. 22 mm Unit symbols approx. 14 mm
	Secondary display Character height approx. 10 mm
	Text line 14 characters, 14 segments
	Sensoface 3 status indicators (friendly, neutral, sad smiley).
	Mode Indicators meas, cal, conf, diag Further icons for configuration and messages
	Alarm indication Display blinks, red backlighting
Keypad	Keys meas, info, 4 cursor keys, enter
2 parameter sets	Parameter set A and B (not with MK-CC 065 module) switchover via CONTROL input or manual
Diagnostics functions	Calibration data Depending on the selected process variable
	Device self-test Automatic memory test (RAM, FLASH, EEPROM)
	Display test Display of all segments
	Logbook (SW-A002) Recording of events, 100 entries
	Extended logbook (SW-A003) Audit trail recording according to 21 CFR Part 11 200 entries
HART communication (SW-A001)	Digital communication via FSK modulation of output current 1, HART version 6
	Device identification, measured values, status and messages, parameter setting, calibration, records
	Conditions Output current ≥ 3.8 mA Load resistance $\geq 250 \Omega$
FDA 21 CFR Part 11	Access control by editable passcodes
	Logbook entry and flag via HART in the case of configuration changes
	Message and logbook entry when enclosure is opened
Service functions	Current source Current specifiable for output 1 / 2 (00.00 ... 22.00 mA)
	Manual controller Controller output entered directly (start of control process)
	Sensor monitor Display of direct sensor signals
	Relay test Manual control of relay contacts

Data retention	Parameters, calibration data, logbook > 10 years (EEPROM)
Electrical safety	Protection against electric shock by protective separation of all extra-low-voltage circuits against mains according to EN 61010-1
Explosion protection A402B	See Control Drawing or www.knick.de
EMC	EN 61326 Emitted interference Class B (residential environment) Immunity to interference Industry
RoHS conformity	according to EC directive 2002/95/EC
Power supply	80 V (-15%) ... 230 (+10%) V AC ; ≤ 10 W ; 45 ... 65 Hz 24 V (-15%) ... 60 (+10%) V DC ; 10 W Overvoltage category II, protection class II
Nominal operating conditions	Ambient temperature -20 ... +55 °C Transport/Storage temperature -30 ... +70 °C Relative humidity 10 ... 95 % not condensing
Housing	Molded enclosure made of PBT/PC, glass-reinforced Mounting Wall, pipe/post or panel mounting Color Gray, RAL 7001 Ingress protection IP 67 / NEMA 4X outdoor (with pressure compensation) Flammability UL 94 V-0 Dimensions H 148 mm, W 148 mm, D 117 mm Control panel cutout 138 mm x 138 mm to DIN 43 700 Weight 1.2 kg Cable glands 3 knockouts for M20 x 1.5 cable glands 2 knockouts for NPT ½" or rigid metallic conduit Connections Terminals, conductor cross section max. 2.5 mm ²

* User-defined

1) Acc. to EN 60746-1, at nominal operating conditions

Measuring Ranges (01 ... 11)

Substance	Concentration ranges		
NaCl	0-26 wt% (0 °C / +32 °F) 0-26 wt% (+100 °C / +212 °F)		
Configuration	-01-		
HCl	0-18 wt% (-20 °C / -4 °F) 0-18 wt% (+50 °C / +122 °F)	22-39 wt% (-20 °C / -4 °F) 22-39 wt% (+50 °C / +122 °F)	
Configuration	-02-	-07-	
NaOH	0-13 wt% (0 °C / +32 °F) 0-24 wt% (+100 °C / +212 °F)	15-50 wt% (0 °C / +32 °F) 35-50 wt% (+100 °C / +212 °F)	
Configuration	-03-	-10-	
H ₂ SO ₄	0-26 wt% (-17 °C/-1.4 °F) 0-37 wt% (+110 °C/+230 °F)	28-77 wt% (-17 °C/-1.4 °F) 39-88 wt% (+115 °C/+239 °F)	94-99 wt% (-17 °C/-1.4 °F) 89-99 wt% (+115 °C/+239 °F)
Configuration	-04-	-09-	-06-
HNO ₃	0-30 wt% (-20 °C / -4 °F) 0-30 wt% (+50 °C / +122 °F)	35-96 wt% (-20 °C / -4 °F) 35-96 wt% (+50 °C / +122 °F)	
Configuration	-05-	-08-	
H ₂ SO ₄ +SO ₃ (Oleum)	13-45 wt% (0 °C / +32 °F) 13-45 wt% (+120 °C / +248 °F)		
Configuration	-11-		

For the solutions listed above, the device can determine the substance concentration from the measured conductivity and temperature values in % by weight. The measurement error is made up of the sum of measurements errors during conductivity and temperature measurement and the accuracy of the concentration curves stored in the device. We recommend to calibrate the device together with the sensor, eg, directly to concentration using the CAL_CELL method. For exact temperature measurement, you should perform a temperature probe adjustment. For measuring processes with rapid temperature changes, use a separate temperature probe with fast response.

When measuring processes such as dilution or intensification of CIP solutions (Clean-In-Place), it is helpful to switch between the parameter sets for measuring the process medium and for measuring the CIP solution.

-01- Sodium chloride solution NaCl

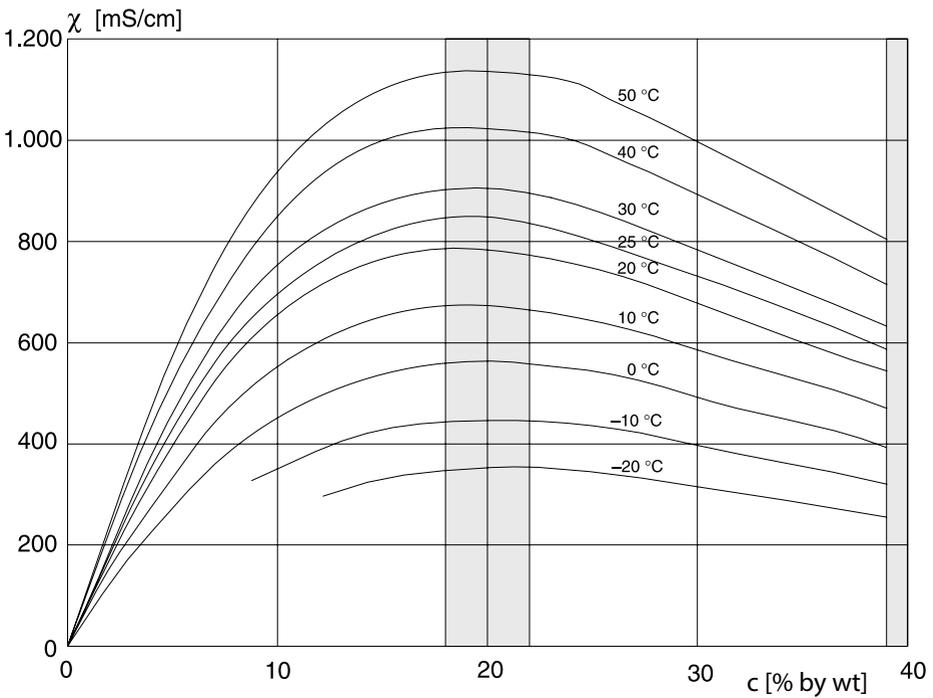

Concentration measurement not possible in this range.

Conductivity versus substance concentration and process temperature for sodium chloride solution (NaCl)

-02- Hydrochloric acid HCl**-07-**
